Operating Instructions

Camera Control Unit

Model No. AK-UCU600P

Model No. AK-UCU600PS

Model No. AK-UCU600E

Model No. AK-UCU600ES

Please carefully read this manual, and save this manual for future use. Before using this product, be sure to read "Read this first!" (pages 2 to 6).

Read this first!

CAUTION

RISK OF ELECTRIC SHOCK DO NOT OPEN

CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK,
DO NOT REMOVE COVER (OR BACK).
NO USER-SERVICEABLE PARTS INSIDE.
REFER TO SERVICING TO QUALIFIED SERVICE PERSONNEL.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

WARNING:

This equipment must be grounded.

To ensure safe operation, the three-pin plug must be inserted only into a standard three-pin power outlet which is effectively grounded through normal household wiring.

Extension cords used with the equipment must have three cores and be correctly wired to provide connection to the ground. Wrongly wired extension cords are a major cause of fatalities.

The fact that the equipment operates satisfactorily does not imply that the power outlet is grounded or that the installation is completely safe. For your safety, if you are in any doubt about the effective grounding of the power outlet, please consult aqualified electrician.

WARNING:

- To reduce the risk of fire or electric shock, do not expose this equipment to rain or moisture.
- To reduce the risk of fire or electric shock, keep this
 equipment away from all liquids. Use and store only in
 locations which are not exposed to the risk of dripping
 or splashing liquids, and do not place any liquid
 containers on top of the equipment.

WARNING:

Always keep memory cards (optional accessory) out of the reach of babies and small children.

WARNING:

Installation should only be performed by qualified installation personnel. Improper installation may result in the entire apparatus falling down and causing injury.

CAUTION:

To reduce the risk of fire or electric shock and annoying interference, use the recommended accessories only.

CAUTION:

In order to maintain adequate ventilation, do not install or place this unit in a bookcase, built-in cabinet or any other confined space. To prevent risk of electric shock or fire hazard due to overheating, ensure that curtains and any other materials do not obstruct the ventilation.

CAUTION:

The mains plug of the power supply cord shall remain readily operable.

The AC receptacle (mains socket outlet) shall be installed near the equipment and shall be easily accessible. To completely disconnect this equipment from the AC mains, disconnect the power cord plug from the AC receptacle.

CAUTION:

Invisible Laser radiation is emitted from the Optical fiber connector when this product is turned on. Don't look into directly into the Optical fiber connector of this product.

CAUTION:

This product uses a semiconductor laser system and is a Class 1 Laser Product complies with Radiation Performance Standards, 21CFR SUBCHAPTER J.

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

Don't make any modifications.

Don't repair by yourself.

Refer servicing to qualified personnel.

CAUTION:

- Keep the temperature inside the rack to between 0 °C to 40 °C (32 °F to 104 °F).
- Bolt the rack securely to the floor so that it will not topple over when the unit is drawn out.

CAUTION:

Naked flame sources, such as lighted candles, should not be placed on the apparatus.

CAUTION:

To reduce the risk of fire or electric shock, refer mounting of the optional interface boards to qualified service personnel.

NOTIFICATION (Canada)

CAN ICES-003 (A)/NMB-003(A)

indicates safety information.

For AK-UCU600P, AK-UCU600PS

IMPORTANT SAFETY INSTRUCTIONS

- 1) Read these instructions.
- 2) Keep these instructions.
- 3) Heed all warnings.
- 4) Follow all instructions.
- 5) Do not use this apparatus near water.
- 6) Clean only with dry cloth.
- 7) Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
- 8) Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
- 9) Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding-type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
- 10) Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
- 11) Only use attachments/accessories specified by the manufacturer.
- 12) Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.

FCC NOTICE (USA)

This device complies with part 15 of the FCC Rules.

Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION:

This equipment has been tested and found to comply with the limits for a class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

FCC Warning:

To assure continued FCC emission limit compliance, the user must use only shielded interface cables when connecting to external units. If DVI-D port is to be used it must be connected to PC by compatible interface cable with two ferrite cores. Also, any unauthorized changes or modifications to this equipment could void the user's authority to operate it.

indicates safety information.

For AK-UCU600E, AK-UCU600ES

Caution for AC Mains Lead

FOR YOUR SAFETY PLEASE READ THE FOLLOWING TEXT CAREFULLY.

This product is equipped with 2 types of AC mains cable. One is for continental Europe, etc. and the other one is only for U.K.

Appropriate mains cable must be used in each local area, since the other type of mains cable is not suitable.

FOR CONTINENTAL EUROPE, ETC.

Not to be used in the U.K.

FOR U.K. ONLY

If the plug supplied is not suitable for your socket outlet, it should be cut off and appropriate one fitted.

FOR U.K. ONLY

This appliance is supplied with a moulded three pin mains plug for your safety and convenience.

A 13 amp fuse is fitted in this plug.

Should the fuse need to be replaced please ensure that the replacement fuse has a rating of 13 amps and that it is approved by ASTA or BSI to BS1362. Check for the ASTA mark rather on the body of the fuse.

If the plug contains a removable fuse cover you must ensure that it is refitted when the fuse is replaced.

If you lose the fuse cover the plug must not be used until a replacement cover is obtained.

A replacement fuse cover can be purchased from your local Panasonic Dealer.

How to replace the fuse

1. Open the fuse compartment with a screwdriver.

2. Replace the fuse.

indicates safety information.

EMC NOTICE FOR THE PURCHASER/USER OF THE APPARATUS

1. Pre-requisite conditions to achieving compliance with the above standards

<1> Peripheral equipment to be connected to the apparatus and special connecting cables

- The purchaser/user is urged to use only equipment which has been recommended by us as peripheral equipment to be connected to the apparatus.
- The purchaser/user is urged to use only the connecting cables described below.

<2> For the connecting cables, use shielded cables which suit the intended purpose of the apparatus.

· Video signal connecting cables

Use double-shielded coaxial cables, which are designed for 75-ohm type high-frequency applications, for SDI (Serial Digital Interface).

Coaxial cables, which are designed for 75-ohm type high-frequency applications, are recommended for analog video signals.

· Audio signal connecting cables

If your apparatus supports AES/EBU serial digital audio signals, use cables designed for AES/EBU.

Use shielded cables, which provide quality performance for high-frequency transmission applications, for analog audio signals.

• Other connecting cables (LAN, RS-422)

Use double shielded cables, which provide quality performance for high-frequency applications, as connecting cables

- When connecting to the DVI signal terminal, use a cable with a ferrite core.
- If your apparatus is supplied with ferrite core(s), they must be attached on cable(s) following instructions in this manual.

2. Performance level

The performance level of the apparatus is equivalent to or better than the performance level required by these standards.

However, the apparatus may be adversely affected by interference if it is being used in an EMC environment, such as an area where strong electromagnetic fields are generated (by the presence of signal transmission towers, cellular phones, etc.). In order to minimize the adverse effects of the interference on the apparatus in cases like this, it is recommended that the following steps be taken with the apparatus being affected and with its operating environment:

- 1. Place the apparatus at a distance from the source of the interference.
- 2. Change the direction of the apparatus.
- 3. Change the connection method used for the apparatus.
- 4. Connect the apparatus to another power outlet where the power is not shared by any other appliances.

AEEE Yönetmeliğine Uygundur. AEEE Complies with Directive of Turkey.

Disposal of Old Equipment

Only for European Union and countries with recycling systems

This symbol on the products, packaging, and/or accompanying documents means that used electrical and electronic products must not be mixed with general household waste.

For proper treatment, recovery and recycling of old products, please take them to applicable collection points in accordance with your national legislation.

By disposing of them correctly, you will help to save valuable resources and prevent any potential negative effects on human health and the environment. For more information about collection and recycling, please contact your local municipality, dealer or supplier.

Penalties may be applicable for incorrect disposal of this waste, in accordance with national legislation.

Introduction

How to View This Manual

About trademarks and registered trademarks

- Microsoft[®], Windows[®], Windows[®] 7, Windows[®] 8, Windows[®] 8.1, Windows[®] 10, Internet Explorer[®], ActiveX[®] and DirectX[®] are either registered trademarks or trademarks of Microsoft Corporation in the United States and other countries.
- Apple, Mac and OS X are registered trademarks of Apple Inc., in the United States and other countries.
- Intel® and Intel® Core™ are trademarks or registered trademarks of Intel Corporation and its subsidiaries in the United States and other countries.
- SDXC logo is a trademark of SD-3C and LLC.
- Other names of companies or products in this manual are either registered trademarks or trademarks of their respective owners.

About copyright

Distributing, copying, disassembling, reverse compiling, reverse engineering and also exporting in violation of export laws of the software provided with this unit are expressly prohibited.

Illustrations and screen displays featured in the manual

- What is shown in the manual's illustrations and screen displays may differ from how it actually appears.
- The screenshots are used in accordance with the guidelines of Microsoft Corporation.
- Functions which can be used by Windows only are indicated using [Windows].

Overview

This camera control unit (CCU) is designed to be used with the 4K studio camera (AK-UC4000; sold separately, AK-UC3000; sold separately, AK-UC3000; sold separately, AK-PLV100; sold separately).

Connect it to the 4K studio camera (hereinafter referred to as the camera) with an optical fiber multi cable (sold separately).

You can use the unit to input and output the video signals of various formats.*1

The unit supports 12G/6G/3G-HD/HD-SDI outputs, analog composite outputs, HD/SD-SDI return inputs, VBS return inputs, and prompter inputs (HD-SDI, analog composite).

The unit is equipped with an HD-TRUNK/TICO output, LAN-TRUNK connector*2, and TRUNK connector.

Intercom calls with the camera and microphone audio output are possible.

The unit also comes with tally and other system interface inputs.

Connecting the ROP (AK-HRP1000; sold separately, AK-HRP1005; sold separately, AK-HRP1010; sold separately, AK-HRP1015; sold separately, AK-HRP250; sold separately) with a multi cable (sold separately) allows you to use the ROP to control the adjustment and setting of the camera and this unit.

- *1: Configure the format and imaging mode settings on the camera according to the format setting of the CCU.
- *2: This cannot be used with UHD mode and HS mode.

Notice

Personal computer requirements

Use a host computer that satisfies the following conditions.

CPU	CPU Intel® Core™2 DUO 2.4 GHz or better is recommended	
Memory	Windows 1 GB or more (However, 2 GB or more for the 64-bit versions of Microsoft® Windows® 10, Microsoft® Windows® 8.1, Microsoft® Windows® 8, and Microsoft® Windows® 7)	
	Mac 2 GB or more	
Network function	100BASE-TX 1 port	
Image display function	Resolution: 1024×768 pixels or more Color generation: True Color 24-bit or better	
Supported operating systems and Web browser	Windows Microsoft® Windows® 10 Pro 64-bit/32-bit*1 Microsoft® Windows® 8.1 Pro 64-bit/32-bit*1 Windows® Internet Explorer® 11.0*1*3 Microsoft® Windows® 8 Pro 64-bit/32-bit*1 Windows® Internet Explorer® 10.0*1*3 Microsoft® Windows® 7 Professional SP1 64-bit/32-bit*2 Windows® Internet Explorer® 11.0/10.0/9.0/8.0*3 Mac OS X 10.12 Safari 10 OS X 10.11 Safari 9 OS X 10.10 Safari 8.0.4 OS X 10.9 Safari 7.0.2	
	Safari 7.0.2 OS X 10.8 Safari 6.1.2	

^{*1:} Use the desktop version of Internet Explorer. (Internet Explorer for Windows UI is not supported.)

Disclaimer of warranty

IN NO EVENT SHALL Panasonic Connect Co., Ltd. BE LIABLE TO ANY PARTY OR ANY PERSON, EXCEPT FOR REPLACEMENT OR REASONABLE MAINTENANCE OF THE PRODUCT, FOR THE CASES, INCLUDING BUT NOT LIMITED TO BELOW:

- ANY DAMAGE AND LOSS, INCLUDING WITHOUT LIMITATION, DIRECT OR INDIRECT, SPECIAL, CONSEQUENTIAL OR EXEMPLARY, ARISING OUT OF OR RELATING TO THE PRODUCT;
- PERSONAL INJURY OR ANY DAMAGE CAUSED BY INAPPROPRIATE USE OR NEGLIGENT OPERATION OF THE USER;
- UNAUTHORIZED DISASSEMBLE, REPAIR OR MODIFICATION OF THE PRODUCT BY THE USER;
- INCONVENIENCE OR ANY LOSS ARISING WHEN IMAGES ARE NOT DISPLAYED, DUE TO ANY REASON OR CAUSE INCLUDING ANY FAILURE OR PROBLEM OF THE PRODUCT;
- ANY PROBLEM, CONSEQUENTIAL INCONVENIENCE, OR LOSS OR DAMAGE, ARISING OUT OF THE SYSTEM COMBINED BY THE DEVICES OF THIRD PARTY;
- ANY INCONVENIENCE, DAMAGES OR LOSSES RESULTING FROM ACCIDENTS CAUSED BY AN INADEQUATE INSTALLATION METHOD OR ANY FACTORS OTHER THAN A DEFECT IN THE PRODUCT ITSELF;
- LOSS OF REGISTERED DATA CAUSED BY ANY FAILURE;
- ANY DAMAGE OR CLAIMS DUE TO LOSS OR LEAKAGE OF IMAGE DATA OR SETTING DATA SAVED ON THIS UNIT OR ON A MEMORY CARD OR PERSONAL COMPUTER.

^{*2:} Use is not possible in Windows® XP compatibility mode.

^{*3:} Use is not possible with the 64-bit version of Internet Explorer®.

Network security

This unit also has functions which are used when it is connected to a network.

Using the unit when it is connected to a network may possibly give rise to the following.

- Leakage or disclosure of information transmitted via this unit
- Unauthorized use of this unit by a third person with malicious intent
- Interference or stoppage of this unit by a third person with malicious intent

It is your responsibility to take sufficient network security measures such as those described below to protect yourself against the above risks.

- Use this unit in a network secured by a firewall, etc.
- If this unit is used in a system with a personal computer connected, make sure that checks for and removal of computer viruses and malicious programs are implemented regularly.

Also observe the following points.

• Do not install the unit in a location where the unit, cables, and other parts may be easily damaged.

Memory cards

Memory cards used with the unit should conform to SD, SDHC or SDXC standards.

Be sure to use the unit to format memory cards.

Memory cards with the following capacity can be used with the unit.

SD:	2 GB
SDHC:	4 GB to 32 GB
SDXC:	64 GB

For the latest information not included in these Operating Instructions, refer to the support pages at the following website.

https://pro-av.panasonic.net/en/

Observe the following points when using and storing this unit.

- Avoid high temperature and humidity.
- Avoid water droplets.
- Avoid static electricity.

Features

■ 4K and HD format simultaneous operation possible (when using AK-UC4000)

As a standard feature, this unit incorporates 4K video (UHD) output, HD high speed video output, HD video signal output, and analog composite video signals that are available when this unit is used in combination with AK-UC4000.

• Analog composite image output is not available with the AK-NP600 option.

BAR ID display

Characters can be displayed on the color bar signals so as to identify the output source of the images, and then output.

Prompter

As a standard feature, the unit incorporates prompter input. (HD-SDI×1, Analog composite×2)

■ MoIP (with AK-NP600 option)

Using the AK-NP600 option allows for SMPTE ST2110-compliant MoIP.

Accessories

After removing the product from its container, dispose of the power cable cap (if supplied) and packing materials in an appropriate
manner.

^{*1:} The screws for the rack mount adapters come attached to the unit.

Precautions for Use

In addition to the safety precautions given in "Read this first!", also observe the following instructions.

Handle carefully

• Do not drop the product or subject it to a strong impact. Doing so may cause a failure or accident.

Avoid using the unit outdoors

• Use the product in an ambient temperature of 0 °C to 40 °C (32 °F to 104 °F). Avoid using the product in a cold place where the temperature drops below 0 °C (32 °F) or in a hot place where the temperature rises above 40 °C (104 °F) because an extremely low or high temperature will adversely affect the internal parts.

■ Turn off the power before connecting or disconnecting cables

• Before connecting or disconnecting the cables, be sure to turn the power off.

Avoid humidity and dust

• Avoid using the product in a very humid or dusty place because a lot of humidity and dust will cause damage to the internal parts.

Cleaning

- Turn the power off and wipe the product with a dry cloth.
- To remove stubborn dirt, dip a cloth into a diluted solution of kitchen detergent (neutral detergent), wring it out well, and wipe the product gently. Then, wipe the product with a cloth dampened with water. Finally, wipe the product with a dry cloth.

- Avoid using benzine, paint thinners and other volatile fluids.
- If a chemical cleaning cloth is to be used, carefully read through the precautions for its use.

Optical fiber multi cable

When the optical fiber connectors of the optical fiber multi cable (sold separately) become dirty, the optical signal transmission state
will deteriorate. Use commercially available optical connector cleaner to clean the optical connector end faces in accordance with
the instructions.

Consumable parts

 The cooling fan is a consumable part. The replacement cycle is approximately 10 years (when used approximately 8 hours per day).

Contact your dealer to request cooling fan replacement.

Disposal of the unit

When the unit has reached the end of its service life and is to be disposed of, ask a qualified contractor to dispose of the unit
properly in order to protect the environment.

■ Information on software used with this product

This product includes GNU General Public License (GPL) and GNU Lesser General Public License (LGPL) licensed software, and the customer is entitled to obtain, modify, or redistribute the source code for the software.

- This product includes MIT Licensed software.
- This product includes BSD Licensed software.
- For details on obtaining the source codes, visit the following website. https://pro-av.panasonic.net/en/

However, do not contact Panasonic for questions regarding obtained source codes.

Precautions for Installation

In addition to the safety precautions given in "Read this first!", also observe the following instructions.

Be sure to ask your dealer to perform the installation and connection work for the unit.

Connecting a power supply

- Be sure to use the power cable supplied with the unit.
- Connect the [SIGNAL GND] terminal on the rear of the unit to the system ground.
- When the unit will not be used for a long time, turn off the [POWER] switch and remove the power plug from the outlet to save power.

Ground of the power plug

The power cable supplied with the unit has a 3-prong plug with a ground terminal.
 Connect it to a 3-prong outlet with a ground contact.

Grounding

• Ground the system via the [SIGNAL GND] terminal on the unit.

A. [SIGNAL GND] terminal

Handle carefully

- Dropping the unit or subjecting it to a strong impact or vibration may cause a failure or accident.
- Do not allow any foreign objects to enter inside the unit.
 Allowing water, metal items, food or drink, or other foreign objects to enter inside the unit may cause a fire or electric shock.

Installation location

- This unit is designed for indoor use only.
- Do not install the unit in a cold place where the temperature drops below 0 °C (32 °F) or in a hot place where the temperature rises above 40 °C (104 °F).
- Avoid installing the unit where it will be exposed to direct sunlight or near an outlet from which hot air is blown out.
- Installing the unit in a location with a lot of humidity, dust, or vibration may result in a failure.

Mounting the unit in a rack

Mounting the rack mount adapters

- Remove the setting legs (A) secured to the unit.
 Remove them using a Phillips screwdriver.
- 2. Mount the supplied rack mount adapters (B).
 - Mounting screws are not supplied. Use mounting screws removed from the unit using a Phillips screwdriver.
 Tighten the mounting screws for rack mount adapters using a torque of 110 N·m or more.

- A. Setting legs
- B. Rack mount adapters

Mounting the unit in a rack

- Use the unit securely mounted in a standard 19-type rack (depth: 600 mm [23-5/8 inches] or more) compliant with EIA or JIS standards or equivalent.
- Securely fix the unit in place using screws that are appropriate for the rack.
- Be sure to attach a support guide for supporting (A) the rear of the unit.
 (Provide a support guide that is appropriate for the rack.)

A. Support guide

Mounting positions

• Do not block the ventilation holes when installing the unit.

Connection

System configuration

Serial connection

Use the optical fiber multi cable (sold separately) to connect the unit and camera.

Use a ROP cable to connect the unit to the ROP (AK-HRP1000 / AK-HRP1005 / AK-HRP1010 / AK-HRP1015 / AK-HRP250).

For the connection procedure, see "Equipment connections."

→ "Equipment connections" (see page 19)

IP connection

Use the optical fiber multi cable (sold separately) to connect the unit and camera.

Connect the unit to the ROP (AK-HRP1000 / AK-HRP1005 / AK-HRP1010 / AK-HRP1015 / AK-HRP250) via a PoE-compatible switching hub using LAN cables (straight cables: sold separately).

- Read "Network security" before connecting the devices.
- Use a switching hub with PoE support.

For the connection procedure, see "Equipment connections."

→ "Equipment connections" (see page 19)

Equipment connections

- Before proceeding with the connections, check that the power of the unit and camera is OFF.
- Use the optical fiber multi cable to connect the unit and camera.
 Connect only the AK-UC4000 / AK-UC3000 / AK-UC3300 / AK-PLV100 camera: Do not connect any other model.
- Use a dedicated cable to connect the unit to the ROP.
- When the unit's [POWER] switch is set to ON and then the camera's power is set to ON, the camera can be controlled using the ROP.
- The camera statuses are shown on the picture monitor.
 - *Picture monitor displays" (see page 27)

When you configure the unit's settings by menu operations, the menu screens are displayed on the picture monitor.

- → "Menu operations" (see page 40)
- Before disconnecting the cables from the camera and ROP, turn off the camera's power and then turn off the unit's power.
- When connecting the unit to the ROP using IP connection via a switching hub, use a switching hub that provides PoE support.
- When operating multiple ROPs at the same time with the unit connected using IP connection via a switching hub, the ROP operated last will be given priority.

AK-HRP1000 / AK-HRP1005 / AK-HRP1010 / AK-HRP1015 / AK-HRP250

Front panel 2

1	[STATUS] indicators	Lights to indicate the unit status.		
-	[]	[G/L ON] indicator		
		Lights when the external sync signal is synchronized.		
		*Front panel [G/L ON] indicator specifications" (see page 183)		
		[FAN] indicator		
		Lights when the rotation speed of the unit's cooling fan drops below the normal value.		
		[ALARM] indicator Lights when the unit malfunctions.		
2	[CABLE] indicators	Lights to indicate the cable connection status.		
		[NORMAL] indicator This lights when the unit and camera are properly connected by the optical fiber multi cable.		
		[OPEN] indicator		
		This lights when the unit and camera are not connected by the optical fiber multi cable.		
		[SHORT] indicator		
	IDDIVIOVOTEMI I 4 14 I	This lights when the cable connecting the unit and camera has been short-circuited.		
3	[PRIV/SYSTEM] selector switch	This switch is for selecting the party to call using the intercom.		
		Switch position		
		PRIV: For making private calls between the unit and camera side.		
		SYSTEM: For calling the intercom on the system side and camera side.		
4	[PRIV] indicator	Lights when the [PRIV/SYSTEM] selector switch is set to PRIV.		
5	[PROD/BOTH/ENG] selector switch	This switch selects the party to which to speak via the intercom.		
6	[MIC] switch	This switch switches the intercom microphone ON/OFF.		
		Switch position		
		ON: The intercom microphone is turned on.		
		OFF: The intercom microphone is turned off.		
		PTT: The intercom microphone is on only while the switch is held down.		
7	[PGM] switch	This switch mixes audio for the intercom.		
		Switch position		
		PGM1: The sound of PGM1 is mixed with the intercom sound.		
		OFF: The sound of PGM is not mixed with the intercom sound.		
		PGM2: The sound of PGM2 is mixed with the intercom sound.		
8	[INCOM LEVEL] adjustment dial	These controls are for adjusting the volume level of the sound heard through the intercom.		
9	[PGM LEVEL] adjustment dial	This dial adjusts the volume level of the intercom's program audio mix.		
10	[CALL] button	This button calls the camera and the ROP. During calling, it lights red.		

Front panel 3

1	[MENU] button	When you hold down the [MENU] button, the menu screen is displayed on the picture monitor and the [MENU] button lights. If you hold down the [MENU] button while the menu is displayed, the menu closes and the [MENU] button turns off. "Menu operations" (see page 40)
2	[SELECT] dial	This jog dial is for menu screen operations. When the [SELECT] dial is turned clockwise, the cursor moves down; conversely, when it is turned counterclockwise, the cursor moves up. Press the [SELECT] dial to select the menu items. **Menu operations" (see page 40)
3	[USER1] and [USER2] buttons	These buttons are used for assigning functions. Function assignments are selected using [SETUP] in the CCU menu. The following functions are pre-assigned at the factory. [USER1] button: CHARA [USER2] button: LOCK **SETUP** (see page 93)
4	[ROP FRONT/REAR] selector switch	This switch switches between the [ROP] connectors on the front and rear panels. This is enabled when [MAINTENANCE] > [SETUP] > [ROP SW] is set to [SWITCH SELECT] in the CCU menu. **ROP SW" (see page 94)
5	[ROP] connector (front)	This connector is for connecting a ROP (sold separately).
6	Memory card slot	Insert a memory card (sold separately). A memory card can be used to set this unit. **SD CARD" (see page 117)
7	Memory card access lamp	This is lit while the memory card is being accessed.

Rear panel 1

1	[UHD/HS/HD SDI OUT] connectors [1] to [4]	UHD (connects to the AK-UC4000 / AK-UC3000 / AK-UC3300 / AK-PLV100), HS and 3G-HD, HD video signal output connectors (BNC). Signals output can be selected from the CCU menu.
		→ "OUT FORMAT(UHD)" (see page 55)
		→ "OUT FORMAT(HD)" (see page 58)
		→ "OUT FORMAT(UHD_HDR)" (see page 60)
		→ "OUT FORMAT(HD_HDR)" (see page 64)
2	[HD SDI OUT] connectors [5] to [7] and [8/PM]	These connectors (BNC) are for outputting SDI signals in HDTV format. The 3G-HD/HD output mode can be selected by setting the CCU menu. SDI output from the [8/PM] connector can be switched to main line image output or picture monitor output via the CCU menu configurations or ROP control.
		→ "OUT FORMAT(UHD)" (see page 55)
		OUT FORMAT(HD)" (see page 58)
		OUT FORMAT(UHD_HDR)" (see page 60)
		OUT FORMAT(HD_HDR)" (see page 64)
3	[VBS OUT] and [VBS PM OUT] connectors	This connector (BNC) is for outputting analog composite signals in SDTV format. The output from [VBS PM OUT] connector can be switched between output for this unit and output for the picture monitor via the CCU menu configurations.
		→ "SETTING(1/2)" (see page 67)
		This unit's analog composite signal is for use with a monitor. Frame sequence locking is not applied to the BB (black burst) synchronization signal.
4	[VBS RET IN] connector	This connector (BNC) is for inputting analog composite signals for return images in SDTV format.
5	[HD SDI PROMPT IN] and [HD SDI PROMPT OUT] connectors	These connectors (BNC) are for inputting HD-SDI prompter signals. An active through signal is output from the [HD SDI PROMPT OUT] connector.
6	[HD TRUNK/TICO OUT] connector	This connector outputs the HD SDI TRUNK signal input or TICO to the camera.
7	[RET1 IN] to [RET4 IN] and [RET1 OUT] connectors	These connectors (BNC) are for inputting SDI signals for return images in HDTV and SDTV formats. 3G, HD-SDI, and SD-SDI signals are detected automatically. The signal input to [RET1 IN] connector is output from the [RET1 OUT] connector as an active through signal.
8	[ANALOG PROMPT1 IN] and [ANALOG PROMPT2 IN/OUT] connectors	This connector (BNC) is for inputting SD analog composite signals for the prompter. It is not terminated when the unit is turned OFF. You can switch between "output connector for the signal input to IN" or "input connector for ANALOG PROMPT2" for the [ANALOG PROMPT2 IN/OUT] connector via menu configurations. However, the signal is not output when the unit is turned OFF.

9	[REF] connectors	These connectors (BNC) are for inputting reference signals. Black burst (BB) signals and tri-level sync signals can be input, and the type of signals input is recognized automatically.*¹ When no cable is connected to the loop-through output connector (B), the connector is automatically terminated at 75 Ω. Connecting a cable to this connector releases 75 Ω termination. When a cable is connected to the loop-through output connector (B), be sure to connect the other end of the cable to a connector. REF A. Reference signal input connector B. Loop-through output *1: When the [CCU MODE] is [1080/23.98psF], input 1080/23.98psF (47.95 Hz) tri-level sync signals. For details on supported sync signals for each format, see "Front panel [G/L ON] indicator specifications." **Front panel [G/L ON] indicator specifications" (see page 183)
10	[LAN TRUNK] connector	LAN communication is carried using optical transmission between the camera and CCU.

Rear panel 2

1	[LAN] connector	It is the LAN connector (RJ45) for connecting the ROP (AK-HRP1000 / AK-HRP1005 / AK-HRP1010 / AK-HRP1015 / AK-HRP250) with an IP connection. Use a switch hub and connect the devices with a 10BASE-T/100BASE-TX straight cable. This connector is for connecting a personal computer when configuring Web settings. **Web Screen** (see page 119)
2	[AUX] connector	This connector is used for controlling a waveform monitor and external systems (down-convert system, MIC gain selection, alarm output, or tally output).
3	[TRUNK] connector	This connector provides two systems for 2-way communication of camera trunk data (RS-422 and RS-232C).
4	[COMMUNICATION] connector	This connector is for connecting the intercom signals and tally signals to the external system.
5	[ROP] connector	This connector is for connecting a ROP (sold separately).
6	[MSU] connector	This connector is for connecting an MSU (sold separately).
7	[MIC1] and [MIC2] connectors	These connectors are for outputting the analog signals of microphones 1 and 2 of the camera. The microphone level is 0 dBm/600 Ω .
8	[CAMERA] connector	This connector is for connecting the optical fiber multi cable (sold separately).
9	Cooling fan	This is the unit's cooling fan.
10	AC power socket	This socket is for inputting AC power. Connect the supplied power cable, and use a 3-prong outlet and ground the unit properly.
11	[SIGNAL GND] terminal	Connect this to the system ground.

Rear panel 3 (with AK-NP600 option)

1	[UHD/HS/HD SDI OUT] connectors [1] to [4]	UHD (connects to the AK-UC4000 / AK-UC3000 / AK-UC3300 / AK-PLV100), HS and 3G-HD, HD video signal output connectors (BNC). Signals output can be selected from the CCU menu.
		→ "OUT FORMAT(UHD)" (see page 55)
		→ "OUT FORMAT(HD)" (see page 58)
		→ "OUT FORMAT(UHD_HDR)" (see page 60)
		→ "OUT FORMAT(HD_HDR)" (see page 64)
2	[HD SDI PROMPT IN] connector	These connectors (BNC) are for inputting HD-SDI prompter signals.
3	[HD TRUNK/TICO OUT] connector	This connector outputs the HD SDI TRUNK signal input or TICO to the camera.
4	[SFP+1] slot	10GBASE-LR transceiver (SPF+) slot for MoIP input/output.
5	[SFP+2] slot	10GBASE-LR transceiver (SPF+) slot for MoIP input/output.
6	[LAN2] connector	This connector is for ROP (AK-HRP1000 / AK-HRP1005 / AK-HRP1010 / AK-HRP1015 / AK-HRP250).

Picture monitor (PM)

Picture monitor displays

Display the camera statuses, warnings, and other information on the picture monitor using the operation panel of the ROP. Press the [CHARA] button (A) of the ROP to display the desired information.

• When [CHARA] is assigned to the [USER] button on the front panel of the unit (AK-UCU600), the same operation can also be carried out with the [USER] button.

The camera statuses, warnings, and other information are cleared when the [CHARA] button of the ROP is held down.

A. [CHARA] button

Transition of displays

When trouble is detected, warning information is automatically displayed on the picture monitor.

Even if status information or operation information is already displayed on the picture monitor when trouble is detected, priority is given to the display of the warning information.

The descending sequence of priority for the displays on the picture monitor is as follows: warning displays \rightarrow auto displays \rightarrow status displays \rightarrow ROP menu displays \rightarrow CCU menu displays \rightarrow operation displays \rightarrow no display.

When the warning information with the highest priority disappears, the warning information with the next highest priority appears.

Priority	Screen	ROP connected		
Priority	Screen	Yes	No	
High ↑	Warning displays	Warnings are automatically displayed when trouble is detected.	Warnings are automatically displayed when trouble is detected.	
↓ Low		Self-recovery The warning displays are cleared	Self-recovery The warning displays are cleared	
		Press the [CHARA] button of the ROP No display→(WARNING)→ IRIS →Status displays→ Status1 → Status2 → Status3 → Status4 → Status5 → Status6 → Status7 → IRIS・・・	Press the [USER1] button of this unit (This is enabled when [CHARA] is assigned to the button.) When the transition source screen is displayed: The display switches to the transition	
		Hold down the [CHARA] button of the ROP The warning displays are cleared	source screen. When the transition source screen is not displayed:	
		The warning displays are cleared	The warning displays are cleared

	displayed from the ROP while a menu of the CCU (this unit) is displayed, the menu of the CCU (this unit) disappears.	Operations using the [SELECT] dial on the unit	Operations using the [SELECT] dial on the unit	
	Operation displays	Automatically displayed	Automatically displayed	
	No display	-	-	

Information display

This information is displayed on the picture monitor (PM).

Warning displays

The warning information is displayed when trouble is detected in the unit, camera, or optical fiber multi cable.

- Warning information displayed is cleared when the status returns to normal.
- To manually clear the warning information display, hold down the [CHARA] button of the ROP.

Information displayed

Display item	Description		
CAM RCV LVL NG	The level of the optical signal received by the camera is low		
CCU RCV LVL NG	The level of the optical signal received by the CCU is low		
CAM FAN NG	Trouble with the cooling fan of the camera		
CCU FAN NG	Trouble with the cooling fan of the CCU		
CAM HIGH TEMP	The temperature of the camera is abnormally high		
CCU HIGH TEMP	The temperature of the CCU is abnormally high If you continue operation even with the message displayed, power supply to the camera may stop as a protective measure.		
CAM OVER TEMP	Due to overheating, the camera turned OFF automatically as a protective measure		
OVER LOAD	The power supply circuit load to the camera exceeded 90%		
POWER CONT ERROR	Trouble with the power supply circuit to the camera		
CABLE OPEN	The optical fiber multi cable is not connected		
CABLE SHORT	 The optical fiber multi cable is shorted The power supply voltage to the unit dropped momentarily Power supply to the camera will stop as a protective measure. Turn the unit off immediately, and determine and resolve the problem before turning it back on. The camera is malfunctioning or startup of the camera failed for reasons other than the above. 		
FORMAT NG	The CAM mode and CCU mode do not match.		
During data transfer (CAM←→ROP)	Data transfer between the camera and ROP is in progress.		

IRIS display

When the information is not displayed on the picture monitor, display it by pressing the [CHARA] button of the ROP.

- A. Camera number
- B. IRIS F value
- C. IRIS level
- D. IRIS memory
- E. TALLY INFO
 - Set each item to be displayed on the [PM VIEW SETTING] screen that can be accessed by selecting [MAINTENANCE] on the CCU menu. However, this screen will not appear if the menu's [IRIS LEVEL] setting is [OFF].
 - The IRIS schedule is displayed as follows depending on the setting of [IRIS SCALE] that can be accessed by selecting [MAINTENANCE] > [SETUP].

IRIS SCALE: FULL

IRIS SCALE: 2STOP

• In the IRIS level display, the IRIS F value stored in IRIS memory is indicated at the center (+), and the current IRIS F value is displayed relative to the center as "*".

When the center value (+) and the current IRIS value (*) overlap, the display shows "> \star <".

 $\bullet \quad \text{When the IRIS level falls outside either end of the display range, the status is displayed as a flashing ">" or "<".$

- TALLY INFO (E)
 - Display the R tally in two segments of the upper row and the R, G, or YL tally in two segments of the lower row.
 - When all R, G, and YL tally signals are ON, the upper row is red, and the left and right segments of the lower row are green and yellow, respectively.
 - When the R and G tally signals are ON, the upper row is red and the lower row is green.

Status displays

From the IRIS display screen, press the [CHARA] button of the ROP to display the "status display screen".

However, when the "IRIS LEVEL" setting is "OFF", the screen will be displayed first if the [CHARA] button of the ROP is pressed when the information is not displayed on the picture monitor.

When the "status display screen" appears, pressing the [CHARA] button of the ROP again displays the status screen.

Pressing the [CHARA] button repeatedly switches display through the status screens in the sequence $1/7 \rightarrow 2/7 \rightarrow 3/7 \rightarrow 4/7 \rightarrow 5/7 \rightarrow 6/7 \rightarrow 7/7 \rightarrow 1/7 \dots$

Status display screen

- A. Camera number
- B. System format
- C. Scene file number

Not displayed when SCENE FILE is set to OFF.

- D. Shutter value
- E. CCU format information
- F. COLORIMETRY (Y/C conversion coefficient) information
- G. Extender information
- H. Lens information
- I. Zoom position
- J. Focus position
- K. Optical signal reception status (camera and CCU)
- L. ND/CC filter value

The CC filter value is not displayed when AK-UC3300 and AK-PLV100 are connected.

- M. Color temperature
- N. IRIS F value
- O. TALLY INFO
 - Set each item to be displayed on the [PM VIEW SETTING] screen that can be accessed by selecting [MAINTENANCE] on the CCU menu
 - The camera format indicates the format of the signal output from the camera.
 - Pressing the [CHARA] button of the ROP from the status display screen displays the "status screen".
 - TALLY INFO (L)
 - Display the R tally in two segments of the upper row and the R, G, or YL tally in two segments of the lower row.
 - When all R, G, and YL tally signals are ON, the upper row is red, and the left and right segments of the lower row are green and yellow, respectively.
 - When the R and G tally signals are ON, the upper row is red and the lower row is green.

Operation displays

The operation displays appear at the bottom of the screen for approx. 4 seconds when any of the following operations have been performed with the operation panel of the ROP.

- Master gain change
- Electronic shutter change
- Lens extender change
- Scene file change
- REF LOAD is changed
- FILTER is changed

The display time can be changed from [MAINTENANCE] menu > [PM OPERATION STATUS] > [STATUS DISP TIME].

Item	Display range	Remarks

Auto displays

When the following operation is performed while no menu is displayed on the picture monitor, information on the operation performed appears at the bottom of the screen.

- AWB (Auto White Balance) function
- ABB (Auto Black Balance) function
- AUTO SETUP (Auto Setup) function
- The AUTO SETUP function does not work when AK-PLV100 is connected.

When the AUTO SETUP operations are displayed, they will remain displayed until the operations are completed.

The display is cleared 4 seconds after the operations are completed.

If the operations cannot be completed, they will remain displayed until the NG (error) items of the AUTO function are released.

The display time can be changed from [MAINTENANCE] menu > [PM OPERATION STATUS] > [STATUS DISP TIME].

CCU menu

Menu operations

While viewing the menu screen of the picture monitor, operate the [MENU] button and [SELECT] dial on the front panel.

- A. [MENU] button
- B. [SELECT] dial

Displaying and hiding the menus

Menus are displayed or hidden by the following procedure.

1. Press the [MENU] button.

The [MENU] button lights and the menu (CCU MENU) is displayed.

If you press the [MENU] button while the menu is displayed, the menu closes and the [MENU] button turns off.

Basic menu operations

Menu items are selected and set by the following procedure.

1. Turn the [SELECT] dial while in the [CCU MENU], select [OPERATION] or [MAINTENANCE], and then press the [SELECT] dial.

A list of menu items included in the selected item ([OPERATION] or [MAINTENANCE]) is displayed.

When the [SELECT] dial is turned clockwise, the cursor moves down; conversely, when it is turned counterclockwise, the
cursor moves up.

2. Turn the [SELECT] dial to move the cursor to the menu item you want to set, and then press the [SELECT] dial.

The setting screen one level below the selected menu item appears.

• Moving the cursor to the menu title and then pressing the [SELECT] dial redisplays [CCU MENU].

3. Turn the [SELECT] dial to move the cursor to the menu item you want to set, and then press the [SELECT] dial.

The setting value of the selected menu item starts flashing and you can change it.

4. Turn the [SELECT] dial to change the value, and then press the [SELECT] dial.

Turning the [SELECT] dial changes the setting value and pressing the [SELECT] dial confirms the setting value.

When the setting value is confirmed and the flashing stops, you can move the cursor.

With some menu items, setting changes become effective while the setting value is in the flashing state; with others, changes become effective when the [SELECT] dial is pressed to confirm the setting value.

Operation with menu items that have multiple setting items on one line

1. Turn the [SELECT] dial to move the cursor to the menu item you want to set, and then press the [SELECT] dial.

The cursor becomes "\" and you can use the [SELECT] dial to move the cursor to a setting item in the selected menu item.

2. Turn the [SELECT] dial to move the cursor to the item you want to set, and then press the [SELECT] dial.

The setting value of the selected item starts flashing and you can change it.

3. Turn the [SELECT] dial to change the value, and then press the [SELECT] dial.

Turning the [SELECT] dial changes the setting value and pressing the [SELECT] dial confirms the setting value.

When the setting value is confirmed and the flashing stops, you can move the cursor.

If you press the [SELECT] dial while the cursor is on the left of a menu item, the cursor becomes "--" and you can select the menu item.

Text input

1. Turn the [SELECT] dial to move the cursor to the menu item where text is to be input, and then press the [SELECT] dial.

The cursor display changes as indicated by "\u00c4". By turning the [SELECT] dial, you can move the cursor to the next (previous) character position.

2. Turn the [SELECT] dial to move the cursor to position where a character is to be input, and then press the [SELECT] dial.

The selected character starts flashing and you can change it.

3. Turn the [SELECT] dial to change the character, and then press the [SELECT] dial.

Turning the [SELECT] dial changes characters, and pressing the [SELECT] dial confirms character changes.

When a character has been input and the flashing stops, you can move the cursor.

If you press the [SELECT] dial while the cursor is on the left of a menu item, the cursor becomes " \rightarrow " and you can select the menu item.

• Turning the [SELECT] dial clockwise while pressing it increases the speed at which the number increases (turning it counterclockwise decreases the number). Turning the dial more increases the speed even more. This operation is effective for making a large change to a value when the setting width is large (e.g., IP address or port number).

CCU MENU

This is the first screen displayed when you press the [MENU] button.

Select one of the menus.

Item	Content	Details page
OPERATION	Open the OPERATION menu screen.	"OPERATION" (see page 48)
UHD SETTING	Open the UHD SETTING menu screen.	"UHD SETTING" (see page 78)
AUDIO	Open the AUDIO menu screen.	*AUDIO" (see page 85)
MAINTENANCE	Open the MAINTENANCE menu screen.	*MAINTENANCE" (see page 92)

OPERATION

This is the selection screen for the OPERATION menu.

OUTPUT FORMAT(HS) and OUTPUT FORMAT(HS_HDR) are not displayed when AK-PLV100 is connected.

OUT FORMAT(HD_HDR)

This is the selection screen for the OUT FORMAT(HD_HDR) menu.

→*** OUT FORMAT(HD_HDR)(2/2)***

HDR COLORIMETRY BT.2020

Item	Setting value	Setting details
SDI OUT1-4 SDI OUT1	3G_HDR HD_HDR	Set the format of the signals to be output from [1] to [4] of the [UHD/HS/HD SDI OUT] connectors.
SDI OUT1-4	HD_SDR	The content selected in SDI OUT1-4 is displayed for the items of SDI OUT1-4.
SDI OUT2		→ "Output selection conditions" (see page 65)
SDI OUT1-4 SDI OUT3		[SFP+ OUT] is displayed when a MoIP board (AK-NP600) is connected.
SDI OUT1-4		[SFP+ OUT] follows the [SDI OUT1-4] setting in the same way as [SDI OUT 1/2/3/4].
SDI OUT4		Output from SFP+ is enabled only when CCU MODE is set to [1080/59.94P], [720/59.94p],
SDI OUT1-4 SFP+ OUT		[1080/50p], or [720/50p].
SDI OUT5&6 SDI OUT7	3G_HDR 3G_SDR	Set the format of the signals to be output from [5] to [7] of the [HD SDI OUT] connectors. The settings of [SDI OUT5] and [SDI OUT6] are linked and change together.
	HD_HDR HD_SDR PsF_HDR	When [CCU MODE] is [1080/29.97PsF], [1080/23.98PsF] or [1080/25PsF]: PsF_HDR/PsF_SDR/TrueP_HDR/TrueP_SDR/OVER(3G)_HDR/OVER(3G)_SDR
TrueP_HDR OVER(3G)_HDR PsF_SDR TrueP_SDR	With PsF/TrueP/OVER(3G), the settings made for SDI OUT5&6 are reflected in SDI OUT and only switching between HDR/SDR is possible in SDI OUT7.	
	When [CCU MODE] is other than [1080/29.97PsF], [1080/23.98PsF], [1080/25PsF]: 3G_HDR/3G_SDR/HD_HDR/HD_SDR	
	OVER(3G)_SDR	→ "Output selection conditions" (see page 65)
SDI OUT8 HD_HDR HD_SDR PsF_HDR		Set the format of the signals to be output from [8/PM] of the [HD SDI OUT] connector. When [CCU MODE] is [1080/29.97PsF], [1080/23.98PsF] or [1080/25PsF]: PSF_HDR/PSF_SDR
	PsF_SDR	When [CCU MODE] is other than [1080/29.97PsF], [1080/23.98PsF], [1080/25PsF]: HD_HDR/HD_SDR
		Output selection conditions" (see page 65)
SDI OUT8	PM	Set the signal to be output from [8/PM] of the [HD SDI OUT] connector.
NORMAL/PM NORMAL	NORMAL	Can only be set to PM when using a MoIP board (AK-NP600).
		PM:
		Output the picture monitor images.
		NORMAL: Output the main line images.
3G SDI	LEVEL-A LEVEL-B	Set the output format for 3G output.

Item	Setting value	Setting details

ltom	Setting value	Setting details					
Item	- C						
COMPOSITE/PM	PM NORMAL	Set the signal to be output from [VBS PM OUT] connector. • PM: Output the picture monitor images.					
		NORMAL: Output the main line images.					
		When [SDI OUT8] is set to [NORMAL] in the [OUTPUT FORMAT] menu, this will be fixed at [PM] to maintain the [SDI OUT8] or [COMPOSITE/PM] output picture monitor display.					
ANALOG	1-OUT	Set input/output for the [ANALOG PROMPT1 IN] and [ANALOG PROMPT2 IN/OUT] connectors.					
PROMPT	2-IN	When [1-OUT] is selected, the signal input to the [ANALOG PROMPT1 IN] connector becomes the loop-through output. Apply termination on the connected device.					
RETURN FS	ON OFF	Set the delay mode for the HD return signals.					
TRUNK1	RS422	Set the TRUNK1 line send/receive format of the [TRUNK] connector.					
TRUNK2	RS232C	Set the TRUNK2 line send/receive format of the [TRUNK] connector.					
MONO SW	ON OFF	Set CCU output video to monochrome.					
HD BAR SELECT	STD SMPTE ARIB EIAJ SPLIT	Set the color bar signal for output with the HD signal.					
HD BAR LPF	OFF 3TAP 5TAP 7TAP 9TAP	Set the filter to be applied to the color bar signal output with the HD signal.					
HD BAR USER1	75%WHITE 100%WHITE +I_SIGNAL -I_SIGNAL	Set user selection 1 for when [ARIB] has been selected as the [HD BAR SELECT] setting.					
HD BAR USER2	0%BLACK +Q_SIGNAL	Set user selection 2 for when [ARIB] has been selected as the [HD BAR SELECT] setting.					

SETTING(2/2)

This is the selection screen for the SETTING(2/2) menu.

Item	Setting value	Setting details
DOWN CONVERT	SC SQ LB LINK	Set the down-convert system. *Down-conversion mode settings" (see page 177)
UP CONVERT	SC SQ LB LINK	Set the up-convert system.
C/B SETUP*1	OFF COMPST SD_SDI BOTH	Set the SD signal output for use with color bar output. This is only displayed when the format is 59.94 Hz.

^{*1:} AK-UCU600P/600PS

HD PHASE

This is the selection screen for the HD PHASE menu.

___ indicates factory default settings.

Item	Setting value	Setting details
HD H COARSE	-127 to <u>0</u> to +127	Make the coarse setting of the H_FINE phase used with GL HD REF.
HD H FINE	-100 to <u>0</u> to +100	Make the fine setting of the H_FINE phase used with GL HD REF.
V ADVANCE	-3 / -2 / -1 / 0	Set the vertical phase of this unit in relation to the vertical phase of the REF signal. The larger the negative value, the larger the advance. The setting unit varies depending on [CCU MODE].
		• When the mode is [720/59p] or [720/50p], the setting unit is 1H of [720p].
		When the mode is [1080/23.98psF], the setting unit is 1H of [1080/23.98psF].
		Otherwise, the setting unit is 1H of [1080/59i] or [1080/50i].

SD PHASE

This is the selection screen for the SD PHASE menu.

Item	Setting value	Setting details
SD H COARSE	-30 to <u>0</u> to +30	Make the coarse setting of the H_FINE phase used with GL SD REF.
SD H FINE	-100 to <u>0</u> to +100	Make the fine setting of the H_FINE phase used with GL SD REF.
SD-HD V	0H ADVANCE 0H_SD_DLAY	Set the vertical phase used with down-convert SD REF. With [1080/59.94i(24P)], this is fixed to [0H]. With [720/59.94p] and [720/50p], this is fixed to [0H].
SCH	-180 to <u>0</u> to +180	Adjust the SCH phase of VBS output.

BAR ID

This is the selection screen for the BAR ID menu.

___ indicates factory default settings.

Item	Setting value	Setting details
BAR ID SWITCH	ON OFF	Set display of the camera ID in the color bar ON or OFF.
BRIGHTNESS	0 to <u>100%</u>	Set the text color for the camera ID in the color bar.
		The setting can be made in 10% steps. Solution: 100%: White
ID1 POSITION V	<u>00</u> to 05	Set the starting position (vertical) for display of camera ID1 in the color bar.
		Set from which character in the vertical direction, starting from the top left of the color bar, to start displaying the BAR ID using the font size as the reference.
ID1 POSITION H	<u>00</u> to 15	Set the starting position (horizontal) for display of camera ID1 in the color bar.
		Set from which character in the horizontal direction in the color bar to start displaying the BAR ID using the font size as the reference.
ID1	## (Max. 16	Set camera ID1. This ID is displayed in the color bar.
	characters)	Characters which can be used: Alphanumeric characters, spaces, ! # % & '()*+,/:; < = >?[]_~
		If "##" is input, that portion is replaced with the camera number (1 to 15) being managed by the CCU.
ID2 POSITION V	00, <u>01</u> to 05	Set the starting position (vertical) for display of camera ID2 in the color bar.
		Set from which character in the vertical direction, starting from the top left of the color bar, to start displaying the BAR ID using the font size as the reference.
ID2 POSITION H	<u>00</u> to 15	Set the starting position (horizontal) for display of camera ID2 in the color bar.
		Set from which character in the horizontal direction in the color bar to start displaying the BAR ID using the font size as the reference.
ID2	Spaces (Max. 16	Set camera ID2. This ID is displayed in the color bar.
characters)		Characters which can be used: Alphanumeric characters, spaces, ! # % & ' () * + , / : ; < = > ? [] _ ~ • If "##" is input, that portion is replaced with the camera number (1 to 99) being managed by the CCU.
OFFSET V	<u>00</u> to 89	Specify the origin (upper left) in the vertical direction of the character drawing area in pixels.
OFFSET H	<u>00</u> to 79	Specify the origin (upper left) in the horizontal direction of the character drawing area in pixels.
HS PHASE MARKER SW	ON OFF	Set whether PHASE MARKER is multiplexed in the color bar when HS is set.

NOTE

When the coordinates of ID1 and ID2 are the same, BAR ID1's character string will be placed on top of BAR ID2 (BAR ID2 will be
on the bottom). When the vertical coordinates are the same and the horizontal coordinates differ, the BAR ID with the horizontal
coordinates set later will be placed on top.

SELECT RETURN

This is the selection screen for the SELECT RETURN menu.

Item	Setting value	Setting details
SELECT RETURN1	RET1 RET2 RET3 RET4 VBS	Set the input assignment of the return signals. Can only be set to RET1 when SFP+ is selected.
SELECT RETURN2	RET1 RET2 RET3 RET4 VBS	
SELECT RETURN3	RET1 RET2 RET3 RET4 VBS	
SELECT RETURN4	RET1 RET2 RET3 RET4 VBS	

MONITOR

This is the selection screen for the MONITOR menu.

__ indicates factory default settings.

Item	Setting value	Setting details
R	OFF ON	For the setting details, see the following table. **MONITOR menu setting and operation" (see page 76)
G	OFF ON	ON can be set for [R], [G], and [B] simultaneously. Select one of [R], [G] or [B], and one of [SEQ] or [ENC].
В	OFF ON	When [SEQ] and [ENC] are set to [ON], [R], [G], and [B] will be set to [OFF]. When [SEQ] and [ENC] are set to [OFF], [R], [G], and [B] will return to their previous configuration.
SEQ	OFF ON	
ENC	OFF ON	

MONITOR menu setting and operation

The MONITOR menu (R/G/B/SEQ/ENC) operates as follows according to its setting.

MONITOR manu	HDTV		SDTV	Domonko
MONITOR menu	SDI8/PM VBS/PM VBS/PM Remarks		Remarks	
R	R	R	R	Output R instead of Y. PBPR and chroma signals OFF.
G	G	G	G	Output G instead of Y. PBPR and chroma signals OFF.
В	В	В	В	Output B instead of Y. PBPR and chroma signals OFF.
SEQ	YP _B P _R	Y	Y	Chroma signal OFF for VBS output.
ENC	YP _B P _R	VIDEO	VIDEO	Output normal color images.

DETAIL GAIN (-)	-31 to <u>0</u> to +31	Decrease (-) the detail level.
DETAIL CLIP (+)	<u>00</u> to +63	Adjust detail clipping to minimize any roughness that results from excessive detail application.
DETAIL CLIP (-)	<u>00</u> to +63	This limits the length of the undershoot portion of the detail edge component.
DETAIL SOURCE	(G+R)/2 (G+B)/2 (2G+B+R)/4 (3G+R)/4 R G	Set the RGB signal component ratio used for detail creation.
KNEE APERTURE	<u>00</u> to 39	Adjust the knee aperture level.
	201.15	For HDR format, this is fixed at [5].
DETAIL KNEE	<u>00</u> to 15	Adjust the knee detail component.

HD DETAIL(2/2)

This is the selection screen for the HD DETAIL(2/2) menu.

Item	Setting value	Setting details
LEVEL DEPENDENT SWITCH	OFF ON	Enable/disable the function for removing details in dark areas. For HDR format, this is fixed at [OFF].
LEVEL DEPENDENT	00 to <u>8</u> to 15	Set the level of dark detail removal.
DARK DETAIL SWITCH	OFF ON	Enable/disable the function for enhancing details in dark areas. • For HDR format, this is fixed at [OFF].
DARK DETAIL	00 to <u>2</u> to 7	Set the level of dark detail enhancement.

HD SKIN TONE DTL(1/2)

This is the selection screen for the HD SKIN TONE DTL(1/2) menu.

```

Item	Setting value	Setting details
SKIN TONE DETAIL	OFF ON	Enable/disable the skin tone detail function.
SKIN GET		
▶MEMORY SELECT	A B C	Select the skin color table used when applying skin tone detail.
▶CURSOR	OFF ON	Set display of the box cursor at screen center to ON or OFF.
▶POSITION H	0 to <u>50</u> to 100.00	Adjust the horizontal position of the cursor.
▶POSITION V	0 to <u>50</u> to 100.00	Adjust the vertical position of the cursor.
▶GET	NO YES	Select whether to automatically acquire saturation and hue information from the cursor position.
ZEBRA	OFF ON	Enable/disable the zebra display.
▶ZEBRA EFFECT MEMORY	A B C A +B A+C B+C A+B+C	Select the zebra display table.
SKIN TONE EFFECT MEMORY	A B C A+B A+C B+C A+B+C	Select the skin color table used when applying skin tone detail.
SKIN TONE CRISP	-63 to <u>+63</u>	Adjust the skin tone detail.

HD SKIN TONE DTL(2/2)

This is the selection screen for the HD SKIN TONE DTL(2/2) menu.

__ indicates factory default settings.

Item	Setting value	Setting details
I CENTER	000 to <u>87</u> to 255	Set the center position (area to which skin tone is applied) on the I axis.
I WIDTH	000 to <u>20</u> to 255	Set the width of the area to which skin tone is applied on the I axis using the [I CENTER] setting as the center.
Q WIDTH	000 to <u>43</u> to 255	Set the width of the area to which skin tone is applied on the Q axis using the [I CENTER] setting as the center.
Q PHASE	0 to <u>90</u> to 359	Set the phase of the area to which the skin tone effect is applied, with the Q axis being the reference.

HD CHROMA

This is the selection screen for the HD CHROMA menu.

Item	Setting value	Setting details
CHROMA LEVEL SWITCH	OFF ON	Enable/disable gain adjustment for chroma.
CHROMA LEVEL	-100% to <u>0%</u> to +40%	Set the chroma gain adjustment.

AUDIO

This is the selection screen for the AUDIO menu.

Item	Setting value	Setting details
CCU INCOM VR MIN MD	MUTE MIN_GAIN	Set the minimum intercom volume level.
PGM VR MIN MODE	MUTE MIN_GAIN	Set the minimum PGM volume level.
CCU INCOM OUT GAIN	Normal Boost	Switch the intercom output level.
ENG MIX CH2	ON OFF	Set whether to mix the ENG signal with the intercom's CH2 output.
PROD MIX CH2	ON OFF	Set whether to mix the PROD signal with the intercom's CH2 output.
PGM1 MIX CH2	ON OFF	Set whether to mix the PGM1 signal with the intercom's CH2 output.
PGM2 MIX CH2	ON OFF	Set whether to mix the PGM2 signal with the intercom's CH2 output.

STBY INTERCOM

This is the selection screen for the STBY INTERCOM menu.

__ indicates factory default settings.

Item	Setting value	Setting details
INPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Set the standby intercom input signal level.
OUTPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Set the standby intercom output signal level.
CANCEL LEVEL	-20.0dB to +20.0dB *1 (0.5dB Step)	Set the standby intercom I/O cancellation signal level.
STBY INCOM ON/OFF	ON OFF	Set the standby intercom to ON or OFF.

^{*1:} The default setting varies depending on adjustment at the factory.

COMMUNICATION

This is the selection screen for the COMMUNICATION menu.

Item	Setting value	Setting details
INCOM1 ENG/PROD	ENG PROD	Set the intercom 1 voice line of the communication connector.
INCOM2 ENG/PROD	ENG PROD	Set the intercom 2 voice line of the communication connector.
PRIV/SYSTEM SW	ENG PROD BOTH OFF INCOM1 INCOM2	Set the voice assignment of the [PRIV/SYSTEM] switch.

INTERCOM1

This is the selection screen for the INTERCOM1 menu.

Item	Setting value	Setting details
4W/RTS/CLRCOM	4W RTS CLRCOM	Select the intercom 1 voice I/O method.
4W INPUT GAIN	<u>0dB</u> 20dB	Switch the 4W (intercom 1) input gain.
4W INPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Switch the 4W (intercom 1) input level.
4W OUTPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Switch the 4W (intercom 1) output level.
RTS INPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Switch the RTS (intercom 1) input level.
RTS OUTPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Switch the RTS (intercom 1) output level.
RTS CANCEL LEVEL	-20.0dB to +20.0dB *1 (0.5dB Step)	Switch the RTS (intercom 1) I/O cancellation level.
CLRCOM INPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Set the clear-com (intercom 1) input volume.
CLRCOM OUTPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Set the clear-com (intercom 1) output volume.
CLRCOM CANCEL LEVEL	-20.0dB to +20.0dB *1 (0.5dB Step)	Adjust the clear-com (intercom 1) I/O cancellation signal level.
RTS/CLRCOM LOAD	ON OFF	Switch ON or OFF for the intercom 1 RTS/CLRCOM 200 Ω load.

^{*1:} The default setting varies depending on adjustment at the factory.

INTERCOM2

This is the selection screen for the INTERCOM2 menu.

Item	Setting value	Setting details
4W/RTS/CLRCOM	4W RTS CLRCOM	Select the intercom 2 voice I/O method.
4W INPUT GAIN	<u>0dB</u> 20dB	Switch the 4W (intercom 2) input gain.
4W INPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Switch the 4W (intercom 2) input level.
4W OUTPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Switch the 4W (intercom 2) output level.
RTS INPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Switch the RTS (intercom 2) input level.
RTS OUTPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Switch the RTS (intercom 2) output level.
RTS CANCEL LEVEL	-20.0dB to +20.0dB *1 (0.5dB Step)	Switch the RTS (intercom 2) I/O cancellation level.
CLRCOM INPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Set the clear-com (intercom 2) input volume.
CLRCOM OUTPUT LEVEL	-40dB to <u>0dB</u> to +20dB (1dB Step)	Set the clear-com (intercom 2) output volume.
CLRCOM CANCEL LEVEL	-20.0dB to +20.0dB *1 (0.5dB Step)	Adjust the clear-com (intercom 2) I/O cancellation signal level.
RTS/CLRCOM LOAD	ON OFF	Switch ON or OFF for the intercom 2 RTS/CLRCOM 200 Ω load.

^{*1:} The default setting varies depending on adjustment at the factory.

PGM

This is the selection screen for the PGM menu.

Item	Setting value	Setting details
PGM1 GAIN	<u>0dB</u> 20dB	Switch the PGM1 input gain.
PGM1 LV	-40dB to <u>0dB</u> to +20dB	Set the PGM1 input volume.
PGM2 GAIN	0dB 20dB	Switch the PGM2 input gain.
PGM2 LV	-40dB to <u>0dB</u> to +20dB	Set the PGM2 input volume.

		MENU/USER1 LOCK
		Invalidate [MENU] button, [USER1] button (Function is assigned, but nothing happens when button pressed.)
		BARS Color bar ON/OFF
		CLEAN PM/NORM selection for SDI8 OUT
ROP SW FRONT ONL		Sets the connector used to connect ROP.
	REAR ONLY SWITCH SELECT	FRONT ONLY
		Allows connection via the front panel only, regardless of the switch. REAR ONLY
		Allows connection via the rear panel only, regardless of the switch.
		SWITCH SELECT
		The setting will be determined by the front panel switch setting.
TALLY	MAKE V	Select the input format for the TALLY signal.
	V	MAKE When the circuit between the TALLY IN H terminal and TALLY IN C terminal is OPEN, TALLY is OFF, and when it is MAKE, TALLY is ON.
		The TALLY IN H terminal is internally pulled up to +5 V with a 2.2 K resistor through a protective diode. The maximum current is 20 mA or less.
		When voltage is applied to the TALLY IN H terminal, TALLY is ON, and when voltage is not applied, TALLY is OFF. Connect TALLY IN C to GND.
		 A resistor of about 12.4 kΩ is inserted between TALLY IN H and TALLY IN C. The maximum voltage that can be applied in 34 V and the maximum current in 30 mA
PANEL LED BRIGHT	1 to <u>3</u> to 5	voltage that can be applied is 24 V, and the maximum current is 20 mA. Sets the brightness of the front panel indicators.
7SEG BRIGHT	1 to 8 to 15	Sets the brightness of the 7-segment indicators.
LAN TRUNK	1Gbps	Sets the communication speed for when LAN TRUNK is used.
	100Mbps	

AUX

This is the selection screen for the AUX menu.

___ indicates factory default settings.

Item	Setting value	Setting details
FUNCTION	WFM_TYPE-A+SD_ASPECT WFM_TYPE-B+SD_ASPECT AUDIO GAIN+SD_ASPECT	Switch the function of the [AUX] connector. WFM_TYPE-A+SD_ASPECT / WFM_TYPE-B+SD_ASPECT Waveform monitor control output and down-conversion input
		AUDIO GAIN+SD_ASPECT Camera's MIC gain control output and down-conversion input

Selecting connected waveform monitors

Configure the type of waveform monitor (WFM) to connect to the [AUX] connector as follows.

Setting value	Control mode
TYPE-A	Coded Mode
TYPE-B	Direct Mode

- There are two types of waveform monitor (WFM) you can connect.
- You can recall presets for the waveform monitor in the [MONITOR] menu.
 Waveform monitor presets must be configured on the waveform monitor beforehand.
 Depending on the model, connection of the waveform monitor to the unit may require cable connections other than those described.

Relationship between the MONITOR menu and waveform monitor preset numbers

By using the preset function of the waveform monitor, you can load the waveform monitor's waveform display settings.

MONITOR menu setting	Preset setting numbers of waveform monitor
R	Preset1
В	Preset2
G	Preset3
R+B+G	Preset4
R+B	
R+G	
B+G	
SEQ	Preset5
ENC	Preset6

• For details on the controls that correspond to the preset numbers set on the waveform monitor, consult your dealer.

ANALOG GAIN

This is the selection screen for the ANALOG GAIN menu.

Item	Setting value	Setting details
VBS	-50 to +50	Set the signal level to be output from [VBS OUT] connector.
VBS/PM	-50 to +50	Set the signal level to be output from [VBS PM OUT] connector.
PROMPT1	-50 to +50	Set the ANALOG PROMPT 1 signal level.
PROMPT2	-50 to +50	Set the ANALOG PROMPT 2 signal level.

ND/CC NAME(1/2)

This is the selection screen for the ND/CC NAME(1/2) menu.

Item	Setting value	Setting details
ND FILTER_1 NAME	5 characters (Factory setting: 1)	Set the name (maximum 5 characters) of ND filter 1 (CAP). The name set here is displayed in the status display (STATUS2).
		Characters which can be used: Alphanumeric characters, spaces, ! # % & ' () * + , / : ; < = > ? [] _ ~
ND FILTER_2 NAME	5 characters (Factory setting: 2)	Set the name (maximum 5 characters) of ND filter 2 (CLEAR). The name set here is displayed in the status display (STATUS2).
		Characters which can be used: Alphanumeric characters, spaces, ! # % & ' () * + , / : ; < = > ? [] _ ~
ND FILTER_3 NAME	5 characters (Factory setting: 3)	Set the name (maximum 5 characters) of ND filter 3 (1/4). The name set here is displayed in the status display (STATUS2).
		Characters which can be used: Alphanumeric characters, spaces, ! # % & ' () * + , / : ; < = > ? [] _ ~
ND FILTER_4 NAME	5 characters (Factory setting: 4)	Set the name (maximum 5 characters) of ND filter 4 (1/16). The name set here is displayed in the status display (STATUS2).
		Characters which can be used: Alphanumeric characters, spaces, ! # % & ' () * + , / : ; < = > ? [] _ ~
ND FILTER_5 NAME	5 characters (Factory setting: 5)	Set the name (maximum 5 characters) of ND filter 5 (1/64). The name set here is displayed in the status display (STATUS2).
		Characters which can be used: Alphanumeric characters, spaces, ! # % & ' () * + , / : ; < = > ? [] _ ~

NOTE

• When AK-UC3300 and AK-PLV100 are connected, the display for "ND/CC NAME" changes to "ND NAME" and [ND FILTER 5 NAME] is not displayed.

ND/CC NAME(2/2)

This is the selection screen for the ND/CC NAME(2/2) menu.

Item	Setting value	Setting details
CC FILTER_1 NAME	5 characters (Factory setting: A)	Set the name (maximum 5 characters) of CC filter 1 (3200K). The name set here is displayed in the status display (STATUS2).
		Characters which can be used: Alphanumeric characters, spaces, ! # % & '()*+,/:; <=>?[]_~
CC FILTER_2 NAME	5 characters (Factory setting: B)	Set the name (maximum 5 characters) of CC filter 2 (4300K). The name set here is displayed in the status display (STATUS2).
		Characters which can be used: Alphanumeric characters, spaces, ! # % & '()*+,/:;<=>?[]_~
CC FILTER_3 NAME	5 characters (Factory setting: C)	Set the name (maximum 5 characters) of CC filter 3 (6300K). The name set here is displayed in the status display (STATUS2).
		Characters which can be used: Alphanumeric characters, spaces, ! # % & '()*+,/:; <=>?[]_~
CC FILTER_4 NAME	5 characters (Factory setting: D)	Set the name (maximum 5 characters) of CC filter 4 (CROSS). The name set here is displayed in the status display (STATUS2).
		Characters which can be used: Alphanumeric characters, spaces, ! # % & '()*+,/:; <=>?[]_~
CC FILTER_5 NAME	5 characters (Factory setting: E)	Set the name (maximum 5 characters) of CC filter 5 (DF0). The name set here is displayed in the status display (STATUS2).
		Characters which can be used: Alphanumeric characters, spaces, ! # % & '()*+,/:; <=>?[]_~

• When AK-UC3300 and AK-PLV100 are connected, "ND/CC NAME(2/2)" is not displayed.

NETWORK(1/2)

```

Item	Setting value	Setting details
MAIN VIDEO TX		This is the setting for the main line output video.
▶IP ADDR	(Factory setting: 224.1.0.1)	Sets the IP address for MAIN VIDEO TX.
▶PORT	01024 to 65535 (Factory setting: 49301) (Setting 10670 is prohibited.)	Sets the PORT for MAIN VIDEO TX.
MONITOR VIDEO	тх	This is the setting for the monitor output video.
▶IP ADDR	(Factory setting: 224.1.0.2)	Sets the IP address for MONITOR VIDEO TX.
▶PORT	01024 to 65535 (Factory setting: 49302) (Setting 10670 is prohibited.)	Sets the PORT for MONITOR VIDEO TX.
HD TRUNK TX		This is the setting for the HD TRUNK TX.
▶IP ADDR	(Factory setting: 224.1.0.10)	Sets the IP address for HD TRUNK TX.
▶PORT	01024 to 65535 (Factory setting: 49310) (Setting 10670 is prohibited.)	Sets the PORT for HD TRUNK TX.
MIC1 AUDIO TX		This is the setting for the MIC1 output.
▶IP ADDR	(Factory setting: 224.1.0.3)	Sets the IP address for MIC1 AUDIO TX.
▶PORT	01024 to 65535 (Factory setting: 49303) (Setting 10670 is prohibited.)	Sets the PORT for MIC1 AUDIO TX.
MIC2 AUDIO TX		This is the setting for the MIC2 output.
▶IP ADDR	(Factory setting: 224.1.0.11)	Sets the IP address for MIC2 AUDIO TX.
▶PORT	01024 to 65535 (Factory setting: 49311) (Setting 10670 is prohibited.)	Sets the PORT for MIC2 AUDIO TX.
INCOM1 AUDIO T	X	This is the setting for the INCOM1 output.
▶IP ADDR	(Factory setting: 224.1.0.12)	Sets the IP address for INCOM1 AUDIO TX.
▶PORT	01024 to 65535 (Factory setting: 49312) (Setting 10670 is prohibited.)	Sets the PORT for INCOM1 AUDIO TX.
INCOM2 AUDIO T	X	This is the setting for the INCOM2 output.
▶IP ADDR	(Factory setting: 224.1.0.13)	Sets the IP address for INCOM2 AUDIO TX.
▶PORT	01024 to 65535 (Factory setting: 49313) (Setting 10670 is prohibited.)	Sets the PORT for INCOM2 AUDIO TX.
SET EXECUTE	-	When you press the [SELECT] button, [NETWORK(PRM TX) SET EXECUTE NO/YES] appears. Select [YES] to apply the configured [NETWORK(SFP+ PRM TX)] information to the unit. If this operation is not performed, the changed [NETWORK(SFP+ PRM TX)] settings will not be applied. In addition, if you exit the menu without performing this operation, the settings will return to their original values.

▶PORT	(Factory setting: 49328) (Setting 10670 is prohibited.)	Sets the PORT for INCOMT AUDIO RA.
INCOM2 AUDIO RX		This is the setting for the INCOM2 input.
▶MCAST ADDR	(Factory setting: 224.1.0.29)	Sets the IP address for INCOM2 AUDIO RX.
▶SOURCE ADDR	(Factory setting: 0.0.0.0)	Set to 0.0.0.0 if no limitations on multicast source are to be implemented. If you want to establish a source address, set the relevant
▶PORT	01024 to 65535	address. Sets the PORT for INCOM2 AUDIO RX.
SET EXECUTE	(Factory setting: 49329) (Setting 10670 is prohibited.)	When you press the [SELECT] button, [NETWORK(SCD RX) SET EXECUTE NO/YES] appears. Select [YES] to apply the configured [NETWORK(SFP+ SCD RX)] information to the unit. If this operation is not performed, the changed [NETWORK(SFP+ SCD RX)] settings will not be applied. In addition, if you exit the menu without performing this operation, the settings will return to their original values.

NETWORK(1GbE)

This is the selection screen for the NETWORK(1GbE) menu.

→> NETWORK(1GbE) 2/2

DNS
PRIMARY
SECONDARY
DOMAIN

MANUAL
0.0.0.0
0.0.0.0

Item	Setting value	Setting details
DHCP	OFF, ON (Factory setting: OFF)	Enables/disables DHCP.
IP ADDR	(Factory setting: 192.168.0.52)	Sets the IP address for 1GbE (LAN2).
PORT	(Factory setting: 49330)	Sets the PORT for 1GbE (LAN2).
SUBNETMASK	(Factory setting: 255.255.255.0)	Sets the subnet mask.
DEFAULT GATEWAY	(Factory setting: 192.168.0.1)	Sets the default gateway.
MAC ADDR	Display only	Displays the MAC address.
SET EXECUTE	-	When you press the [SELECT] button, [NETWORK(1GbE) SET EXECUTE NO/YES] appears. Select [YES] to apply the configured [NETWORK(1GbE)] information to the unit. If this operation is not performed, the changed [NETWORK(1GbE)] settings will not be applied. In addition, if you exit the menu without performing this operation, the settings will return to their original values.
DNS	MANUAL, AUTO (Factory setting: MANUAL)	Sets whether the DNS server address is to be acquired automatically (AUTO), or to be input manually (MANUAL). • This can be set only from the web screen (AK-NP600).
▶PRIMARY		This can be set only from the web screen (AK-NP600).
▶SECONDARY		This can be set only from the web screen (AK-NP600).
▶DOMAIN		The value allocated by the DHCP server is displayed. (Up to 253 characters, display up to 128 characters) This can be set only from the web screen (AK-NP600).

NETWORK(TALLY IN)

This is the selection screen for the NETWORK(TALLY IN) menu.

Item	Setting value	Setting details
INDEX NO	1 to 65534	Sets the INDEX NO set by devices that output TALLY.
	(Factory setting: 1)	
PORT	60000 to 65535	Sets the PORT for TALLY IN.
	(Factory setting: 62000)	
SET EXECUTE	-	When you press the [SELECT] button, [NETWORK(TALLY IN) SET EXECUTE NO/YES] appears. Select [YES] to apply the configured [NETWORK(TALLY IN)] information to the unit. If this operation is not performed, the changed [NETWORK(TALLY IN)] settings will not be applied. In addition, if you exit the menu without performing this operation, the settings will return to their original values.

The IP address of TALLY IN becomes the setting of the connected IP network.

Ex.: When input from SFP+ primary
The main IP ADDR of NETWORK(SFP+ PRM) is enabled.

NETWORK(PTP)

This is the selection screen for the NETWORK(PTP) menu.

Item	Setting value	Setting details
DOMAIN	0 to 127 (Factory setting: 127)	Sets the DOMAIN number.
SET EXECUTE	-	When you press the [SELECT] button, [NETWORK(PTP) SET EXECUTE NO/YES] appears. Select [YES] to apply the configured [NETWORK(PTP)] information to the unit. If this operation is not performed, the changed [NETWORK(PTP)] settings will not be applied. In addition, if you exit the menu without performing this operation, the settings will return to their original values.

NETWORK(NMOS)

This is the selection screen for the NETWORK(NMOS) menu.

Item	Setting value	Setting details
NMOS CONTROL	ON, OFF (Factory setting: ON)	Enables/disables the NMOS function.
STATUS	(Factory setting: UNREGISTERED,)	Displays the NMOS operation status, such as RDS connection status.
		(Display only. Settings cannot be modified.)
PORT(IS-04)	1024 to 65535 (Factory setting: 50040)	Sets the port number on the camera for IS-04 Node API.
PORT(IS-05)	1024 to 65535 (Factory setting: 50050)	Sets the port number on the camera for IS-05 Connection API.
RDS IP ADDR	0.0.0.0 to 255.255.255.255	Displays the discovered IP address.
RDS PORT	1 to 65535	Displays the port number automatically discovered.
LABEL SETTING	AUTO	AUTO:
	MANUAL	The LABEL PREFIX cannot be changed.
		It is fixed to UCU600_**** ("****" is the last four digits of the MAC ADDR).
		MANUAL: Text can be set in LABEL PREFIX.
LABEL PREFIX	Maximum 16 characters (alphanumeric characters, spaces, ! # % () + , / = [] _) (Factory setting: UCU600_***** ("****" is the last four digits of the MAC ADDR))	Sets the prefix appended which is shared with NMOS resource names on this unit.
DISCOVERY	uniDNS, mDNS (Factory setting: uniDNS)	Sets the method for registry discovery.
SET EXECUTE	-	When the [SELECT] button is pressed, [NETWORK(NMOS) SET EXECUTE NO/YES] is displayed. The [NETWORK(NMOS)] information you set is updated in the unit when you select [YES]. The modified [NETWORK(NMOS)] settings are not updated if you do not perform this procedure. Also, if you close the menu without performing this procedure, the modified content returns to the original settings.

```

Item	Setting value	Setting details
VERSION	Display only	Displays the version of the entire unit.
SOFTWARE	Display only	Displays the version of the application.
NETWORK	Display only	Display the version of the network software.
UHD FPGA	Display only	Displays the FPGA (UHD) version.
HS FPGA	Display only	Displays the FPGA (HS) version.
RETURN FPGA1	Display only	Displays the FPGA (RETURN1) version.
RETURN FPGA2	Display only	Displays the FPGA (RETURN2) version.
MAIN FPGA	Display only	Displays the FPGA (MAIN) version.
INCOM FPGA	Display only	Displays the FPGA (INCOM) version.
USC FPGA	Display only	Displays the FPGA (USC) version.

PM VIEW SETTING(1/2)

This is the selection screen for the PM VIEW SETTING(1/2) menu.

Item	Setting value	Setting details
CAMERA NO	ON OFF	Set display of the camera number on the picture monitor to ON or OFF.
SYSTEM FORMAT	ON OFF	Set display of the system format on the picture monitor to ON or OFF.
FORMAT MODE	ON OFF	Set display of the format mode on the picture monitor to ON or OFF.
SCENE FILE No	ON OFF	Set display of the scene file number on the picture monitor to ON or OFF.
SHUTTER	ON OFF	Set display of the shutter value on the picture monitor to ON or OFF.
ND/CC FILTER	ON OFF	Set display of the ND/CC filter name to the picture monitor to ON or OFF.
EXTENDER INFO	ON OFF	Set display of extender information (extender and digital extender) on the picture monitor to ON or OFF.
IRIS	ON OFF	Set display of the IRIS F value on the picture monitor to ON or OFF.
IRIS LEVEL	ON OFF	Set display of the IRIS level bar on the picture monitor to ON or OFF. • When [OFF] is set, the IRIS menu is not displayed on the picture monitor.
IRIS SCALE	FULL 2STOP	Set the IRIS display range of the status display screen.
COLOR TEMP VALUE	ON OFF	Set display of the color temperature on the picture monitor to ON or OFF.
IRIS MEMORY	ON OFF	Set display of the IRIS value stored in camera memory on the picture monitor to ON or OFF.

PM VIEW SETTING(2/2)

This is the selection screen for the PM VIEW SETTING(2/2) menu.

Item	Setting value	Setting details
TALLY INFO	ON OFF	Set display of the tally information on the picture monitor to ON or OFF.
F.DROP	ON OFF	Shows/hides the F.DROP that is notified by the camera, on the picture monitor.
ZOOM POSITION	ON OFF	Set display of the zoom position information, which is notified by the camera, on the picture monitor to ON or OFF.
FOCUS POSITION	ON OFF	Set display of the focus position information, which is notified by the camera, on the picture monitor to ON or OFF.
OPT_CAM	ON OFF	Set display of the optical signal level (camera side) on the picture monitor to ON or OFF.
OPT_CCU	ON OFF	Set display of the optical signal level (CCU side) on the picture monitor to ON or OFF.
COLORIMETRY	ON OFF	Set display of COLORIMETRY (Y/C conversion coefficient), which is notified by the camera, on the picture monitor to ON or OFF.
V-LOG	ON OFF	Shows/hides V-LOG information.

PM OPERATION STATUS

This is the selection screen for the PM OPERATION STATUS menu.

Item	Setting value	Setting details
STATUS DISPLAY TIME	0 2	Set display of the status display time on the picture monitor to ON or OFF.
	4	
MANUAL OPERATION STATUS		
MASTER GAIN	ON OFF	Set display of picture monitor operation display item (MASTER GAIN) ON/OFF.
▶ SHUTTER	ON OFF	Set display of the picture monitor operation display item (SHUTTER) to ON or OFF.
▶ LENS EXTENDER	ON OFF	Set display of the picture monitor operation display item (LENS EXT) to ON or OFF.
▶ FILTER	ON OFF	Set display of picture monitor operation display item (FILTER) to ON or OFF.
➤ SCENE FILE	ON OFF	Set display of picture monitor operation display item (SCENE FILE) to ON or OFF.
▶ REF LOAD	ON OFF	Set display of picture monitor operation display item (REF LOAD) ON/ OFF.
AUTO OPERATION STATUS	ON OFF	Set display of picture monitor operation display item (AUTO) to ON or OFF.

SYSTEM

This is the selection screen for the SYSTEM menu.

Web Screen

Network settings

Software

Download Easy IP Setup Software (EasyIPSetup.exe) from the following website and then install them. [Windows]

 Download URL https://pro-av.panasonic.net/en/

Easy IP Setup Software (EasyIPSetup.exe)

This software sets the unit's network settings.

→ "Using Easy IP Setup Software to set the unit's settings" (see page 119)

Plug-in viewer software installer (nwcv4SSetup.exe)

Install the plug-in software (Network Camera View 4S) required to view IP images from the unit in a web browser.

→ "Installing the plug-in viewer software" (see page 121)

Using Easy IP Setup Software to set the unit's settings

The settings related to the unit's network can be set using the supplied Easy IP Setup Software.

To set the settings for a multiple number of units, the settings must be selected for each camera involved.

If the settings cannot be set using Easy IP Setup Software, set the settings for the unit and personal computer individually in [MAINTENANCE] > [NETWORK] of the CCU menu.

➡ "NETWORK(1/2)" (see page 98)

- If, after the network settings have been set, another device on the same network has the same IP address, the network operations
 will not be performed properly. Set the IP address in such a way that it does not duplicate an existing IP address.
- Do not set network settings from a multiple number of Easy IP Setup Software programs at the same time for a single camera.
- Easy IP Setup Software cannot be used from a different subnet via a router.
- It is not possible to display the unit or set its settings using an older version of Easy IP Setup Software (Ver.4.25 or earlier).

Setting Procedure

- 1. Start the Easy IP Setup Software.
- 2. Click the [Search] button.

3. Click the MAC address/IPv4 address of the camera to be set, and click the [Network Settings] button.

- If the same IP address is used for any additional cameras, the numbers of the additional cameras will be displayed in the [IPv4 overlap] column of the cameras concerned.
- When the [Access Camera] button is clicked, the Live screen of the selected camera is displayed.
- 4. Input the network items, and click the [Save] button.

- The connection mode of the unit supports only [Static IP]. Do not set, for example, DHCP because it is not supported.
- After the [Save] button is clicked, it takes about 2 minutes for the settings in the unit to be completed. If this unit is turned
 off or the LAN cable is disconnected before the settings are completed, the settings will be invalidated. In this case, repeat
 the steps to set the settings.

- The unit does not support IPv6.
- When a firewall (including software) has been introduced, enable access to all the UDP ports.
- The unit does not support DNS.

Installing the plug-in viewer software

To view IP images from the unit on a web browser, the "Network Camera View 4S" plug-in viewer software (ActiveX®) must be installed. The plug-in viewer software can be installed directly from the unit.

- [Automatic installation of viewer software] is set to [On] at the time of purchase, allowing you to install directly from the unit. If a message appears in the web browser's information bar, see "Troubleshooting".
 - → "Web Screen" (see page 175)
- When you display the [Live] screen on the personal computer for the first time, the installation screen for the plug-in viewer software (ActiveX) appears. Follow the instructions on the screen to perform installation.
- If the plug-in viewer software (ActiveX) installation screen continues to appear when switching screens, even after it is installed, restart the personal computer.
- To uninstall the plug-in viewer software, select [Control Panel] [Programs] [Uninstall a program] in Windows, and remove "Network Camera View 4S".
- A license is required for the plug-in viewer software for each personal computer on which it is installed. You can view the number
 of times the plug-in viewer software was automatically installed in the [Maintenance] screen. For details on licenses, consult your
 dealer.
 - → "[Maintenance] screen" (see page 145)

Displaying the web screen

With a personal computer connected to the unit, it is possible to view the camera's IP videos or select various settings from the web browser.

Use a LAN crossover cable when connecting a personal computer directly to the unit's LAN connector for IP control. Use a LAN straight cable when connecting through a switching hub or other device.

Notice regarding the Web screen

IP address and subnet mask

Select an IP address for the personal computer within the private address range while ensuring that it is different from the address of the unit. Set the subnet mask to the same address as the unit.

If you need to change the IP address and subnet mask, be sure to ask your dealer to make these changes for you.

. Unit's IP address and subnet mask (factory settings)

IP address	192.168.0.20
Subnet mask	255.255.255.0
Range of private addresses	192.168.0.0 to 192.168.0.255

Personal computer environment required to display the Web screen

For details on the personal computer environment required to display the Web screen, refer to following page.

- → "Personal computer requirements" (see page 11)
 - Some functions on the web setting screen can be used only from a personal computer which is running Windows. (They cannot be used from a personal computer which is running OS X (Mac).)
 Functions which can be used by Windows only are indicated using [Windows].
 - The "Network Camera View 4S" plug-in viewer software must have already been installed in order to display the unit's IP videos using a personal computer which is running Windows. (This is not required for a personal computer which is running OS X (Mac).)
 "Installing the plug-in viewer software" (see page 121)

Displaying the web screen using a personal computer

The procedure is explained here using Windows (Internet Explorer) screens, but it is the same when using the Mac (Safari) screens. (There may be differences in some parts of the screen displays.)

1. Start the web browser of the personal computer.

Use one of the web browsers below depending on the operating system installed in the personal computer.

Installed OS	Web browser
Windows	Internet Explorer
OS X (Mac)	Safari

- 2. Enter the IP address you configured on the Easy IP Setup Software in the address bar of the web browser.
 - Example of input http://registered URL http://192.168.0.20

- If the HTTP port number has been changed from 80, enter [http://<camera IP address>:<port number>] in the address bar.
 Ex.: When the port number is set to 8080:
 http://192.168.0.20:8080
- When this unit is in a local network, set a proxy server from the web browser ([Tools] [Internet Options] in the menu bar)
 to ensure that a proxy server is not used for a local address.

3. Press the [Enter] key.

The web screen appears.

The [Live] screen is displayed initially. You can switch to the [Setup] screen when necessary.

*Switching the [Live] screen or [Setup] screen" (see page 124)

- If the personal computer does not have the plug-in viewer software already installed, an installation confirmation message is
 displayed before the [Live] screen is displayed. In a case like this, follow the on-screen instructions to install the software. [Windows]
 "Installing the plug-in viewer software" (see page 121)
- When "User auth." (see page 139) is set to [On], the user name and password input screen is displayed before the [Live] screen appears.

The default settings for the user name and password are as follows.

User name: admin Password: 12345

- While the initial settings remain used for the user name and password, a message prompting the user to change the user name
 and password is displayed after authorization. In order to ensure security, the password for the user name of "admin" must be
 changed without fail. It is also recommended that the password be changed at regular intervals.
- When an attempt is made to display multiple H.264 images on one personal computer, IP videos may not be displayed depending
 on the performance of the personal computer concerned. [Windows]
- When an item which is underlined on the screen is clicked, a separate window opens, and an input example is displayed.
- Up to 14 users (consisting of users receiving H.264 images and users receiving JPEG images) can access the unit at the same
 time. However, depending on the settings for the [Bandwidth control (bit rate)] and [Max bit rate (per client)], the number of users
 who can access the unit may be limited to less than 14. A message indicating the access limit will appear if the number of users
 exceeds 14. When [Transmission type] is set to [Multicast port] for [H.264], the second and subsequent users receiving H.264
 images will not be counted toward the total access count.
- When "H.264 transmission" (see page 134) is set to [On], H.264 images are displayed. When it is set to [Off], JPEG images will be displayed. JPEG images can be displayed even when [H.264 transmission] is set to [On]. In such cases, however, the maximum frame rate for JPEG images will be 5 fps. [Windows]
- The frame rate for JPEG images may be slower depending on the network environment, performance of your personal computer, subject of the video, and access volume.

<Frame rate for JPEG images>

When [H.264 transmission] is [On]: Maximum 5 fps When [H.264 transmission] is [Off]: Maximum 30 fps

Switching the [Live] screen or [Setup] screen

When the [Live] screen is displayed, click the [Setup] button.

For details on the [Setup] screen, see the following page.

"[Setup] screen" (see page 129)

When the [Setup] screen is displayed, click the [Live] button.

For details on the [Live] screen, see the following page.

→ "[Live] screen" (see page 125)

[Live] screen

This screen allows you to display camera images on the personal computer.

- The items displayed on the screen will differ depending on whether the [H.264] or [JPEG] button is selected under [Compression].
- H.264

• JPEG

	Content	Details page
1	Main area (IP video display area)	→ "Main area (IP video display area)" (see page 126)
2	Compression button	⇒ "[Compression] button" (see page 126)
3	stream button	*[stream] button" (see page 127)
4	Image quality button	→ "[Image quality] button" (see page 127)

6	Full-screen display button/SnapShot button [Windows]	→ "Full-screen display button/SnapShot button" (see page 128)

Parts and their functions ([Live] screen)

Main area (IP video display area)

The IP video of the connected camera will be displayed.

Operating the mouse wheel inside the display area allows you to use the plug-in viewer software's digital zoom. [Windows]

- When the shooting scenes vary significantly, restrictions imposed by the graphics processing (GDI) of the operating system
 installed may give rise to a phenomenon called screen tearing (where parts of the picture are not displayed in synchronization)
 although this will depend on the personal computer used.
- On a personal computer running Windows, if [H.264 transmission] is set to [On], H.264 images and JPEG images can be displayed.
 When it is set to [Off], only JPEG images will appear.

 Furthermore, an a personal computer running OS X (Mac), only JPEG images will be displayed regardless of the [H.364].
 - Furthermore, on a personal computer running OS X (Mac), only JPEG images will be displayed regardless of the [H.264 transmission] settings. (H.264 images will not appear.)
 - + "H.264 transmission" (see page 134)
- When [H.264 transmission] is set to [On], the frame rate for JPEG images may drop, regardless of whether H.264 images are being transmitted.
- The frame rate for JPEG images may be reduced depending on the network environment, performance of the personal computer used, subjects and number of access users.
- Up to 14 users (consisting of users receiving H.264 images and users receiving JPEG images) can access the unit at the same time.
 - However, depending on the settings for the [Bandwidth control (bit rate)] and [Max bit rate (per client)], the number of users who can access the unit may be limited to less than 14.
- If the maximum number of users who can access the unit has exceeded the upper limit, a message advising that the unit is being
 accessed by more users than the maximum number allowed is displayed. [Windows]
- IP video cannot be transmitted when [CCU MODE] is set to [2160/23PsF & over59i] or [1080/23PsF & over59i].

[Compression] button

Switch between H.264 image display and JPEG image display.

- - In the following cases, the selection status of the [Compression] buttons will return to the setting configured in the [Video over IP] tab; [Initial display settings for "Live" page] [Stream]. [Windows]
 - When returning from another screen
 - When the screen is updated

[stream] button

These buttons appear only when H.264 images are displayed. [Windows]

Images are displayed according to the setting configured with [H.264 (1)] / [H.264 (2)] / [H.264 (3)] / [H.264(4)].

1	[1]	When selected, the text "1" on the button turns green, and the images in the main area appear according to the settings configured for [H.264(1)]. ** "H.264 (1) · H.264 (2) · H.264 (3) · H.264 (4)" (see page 134)
2	[2]	When selected, the text "2" on the button turns green, and the images in the main area appear according to the settings configured for [H.264(2)]. ** "H.264 (1) · H.264 (2) · H.264 (3) · H.264 (4)" (see page 134)
3	[3]	When selected, the text "3" on the button turns green, and the images in the main area appear according to the settings configured for [H.264(3)]. ** "H.264 (1) · H.264 (2) · H.264 (3) · H.264 (4)" (see page 134)
4	[4]	When selected, the text "4" on the button turns green, and the images in the main area appear according to the settings configured for [H.264(4)]. ** "H.264 (1) · H.264 (2) · H.264 (3) · H.264 (4)" (see page 134)

- In the following cases, the selection status of the [stream] buttons will return to the setting configured in the [Video over IP] tab; [Initial display settings for "Live" page] [Stream]. [Windows]
 - · When returning from another screen
 - When the screen is updated
- If the H.264 image resolution is set to [1920x1080] or [1280x720], the image may be compressed depending on the size of the web browser window.

[Image quality] button

These buttons appear only when JPEG images are displayed.

When selected, images appear according to the settings configured in the [Image quality(JPEG)] settings.

- In the following cases, the selection status of the [Image quality] button will return to the setting configured in the [Video over IP] tab; [Initial display settings for "Live" page] [Image quality(JPEG)].
 - When returning from another screen
 - · When the screen is updated

[Image Capture Size] button

These buttons appear only when JPEG images are displayed.

They switch the size of images displayed in the main area.

1	1920×1080 [1920 x 1080]	When selected, the text on the [1920 × 1080] button turns green, and the images in the main area appear in 1920 × 1080 size.
2	1280×720 [1280 x 720]	When selected, the text on the [1280 × 720] button turns green, and the images in the main area appear in 1280 × 720 size.
3	640×360 [640 x 360]	When selected, the text on the [640 \times 360] button turns green, and the images in the main area appear in 640 \times 360 size.
4	320×180 [320 x 180]	When selected, the text on the [320 × 180] button turns green, and the images in the main area appear in 320 × 180 size.
5	160×90 [160 x 90]	When selected, the text on the [160 × 90] button turns green, and the images in the main area appear in 160 × 90 size.

- The resolution selected with [JPEG(1)], [JPEG(2)], and [JPEG(3)] under [JPEG] in the [Video over IP] tab is displayed.
- If the resolution is set to [1920×1080] or [1280×720], the image may be compressed depending on the size of the web browser window
- In the following cases, the selection status of the [Image Capture Size] buttons will return to the setting configured in the [Video over IP] tab; [Initial display settings for "Live" page] - [Stream].
 - When returning from another screen
 - When the screen is updated

Full-screen display button/SnapShot button

Display images in full-screen mode. (Full-screen display button) [Windows]

Capture a snapshot. (Snapshot button)

1	Full-screen display button	Display the image in full-screen mode. When the image displayed in the main area is compressed, clicking this once displays the image at the correct resolution in the main area. When the image is displayed at the correct resolution, the image is displayed in full-screen mode. To return to the Live screen, press the [Esc] key on the personal computer while the image is displayed in full-screen mode. The aspect ratio of the displayed image will be adjusted according to the monitor size.
2	Snapshot button	Capture a snapshot (single still image), and display it in a separate window. A pop-up menu appears when you right-click the image, and you can select [Save] to save the image to the personal computer. You can also click [Print] to output from a printer.

NOTE

- The following settings may be necessary.
 In the Internet Explorer menu bar, click [Tools] [Internet Options] [Security] tab, select [Trusted Sites], and then click [Sites].
 Register the camera's address under [Websites] in the window that appears.
- Depending on the network environment, for example, if snapshot capture takes longer than a certain amount of time, the image may not appear.

[Setup] screen

The settings for the unit are selected on this screen.

- The setting menu operations can be performed only by users whose [Access level] is [1. Administrator].
- *Access level" (see page 140)

Logging into the [Setup] screen

1. Click the [Setup] button.

→ "Switching the [Live] screen or [Setup] screen" (see page 124) The login screen appears.

2. Enter the user name and password.

The default settings for the user name and password are as follows.

User name	admin
Password	12345

3. Click the [OK] button.

Click [OK] again when the following screen appears.

 While the initial settings remain used for the user name and password, a message prompting the user to change the user name and password is displayed after authorization. In order to ensure security, the password for the user name of "admin" must be changed without fail.

It is also recommended that the password be changed at regular intervals.

		JPEG (3) Display still images (JPEG(3)).
Refresh interval (JPEG)	• 59.94 Hz	Set the frame rate for JPEG images.
	1fps 2fps 3fps 3fps 5fps 6fps*1 10fps*1 15fps*1 30fps*1	The frame rate may be slower than the specified value depending on the network environment, resolution, image quality, simultaneous access count, etc.
		If images are not transmitted at the specified frame rate, lowering the resolution or image quality may result in transmissions closer to the specified value.
		*1: When [H.264 transmission] is set to [On], the frame rate may be slower than the specified value in some cases.
	2fps	
	5fps 10fps*1	
	12.5fps* ¹ 25fps* ¹	
Image quality (JPEG)	Quality1 Quality2	When displaying JPEG images in the Live screen, set the quality of the first image.
		Quality1 Image quality 1
		Quality2 Image quality 2

JPEG

Set the resolution and quality settings (Quality1 and Quality2) for [JPEG(1)], [JPEG(2)], and [JPEG(3)]. For details on setting the H.264 images, see the following page.

→ "H.264 (1) · H.264 (2) · H.264 (3) · H.264 (4)" (see page 134)

• Different resolutions must be selected for [JPEG(1)] to [JPEG(3)]. The same resolution cannot be selected for separate JPEG images.

Item	Setting value	Setting details
Image capture size	1920x1080 1280x720 640x360 320x180 160x90	Select from the resolutions for the images to be displayed when displaying JPEG images. • Factory settings JPEG (1): 1920×1080 JPEG (2): 640×360 JPEG (3): 320×180
Image quality	0 Super fine 1 Fine 2 3 4 5 Normal 6 7 8 9 Low	Specify the JPEG image quality (2 types) for each resolution. • Factory settings Quality 1 : 5 Normal Quality 2 : 8

H.264 (1) · H.264 (2) · H.264 (3) · H.264 (4)

Specify the [Max bit rate (per client)], [Image capture size], [Image quality], and other settings for H.264 images. [Windows] For details on setting the JPEG images, see the following page.

*JPEG" (see page 133)

• Example of when the screen is [H.264(1)].

		indicates factory default settings.
Item	Setting value	Setting details
H.264 transmission	On Off	Set whether to transmit H.264 images.
	Off	On
		H.264 images are transmitted.
		Off
		H.264 images are not transmitted.
		When [On] has been selected as the [H.264 transmission] setting, both H.264 images and JPEG images can be displayed on the [Live] screen.
		When [On] has been selected as the [H.264 transmission] setting, the frame rate for JPEG images may become slower.
Internet mode (over HTTP)	On Off	Set whether to transmit the H.264 images via the Internet. H.264 images can be transmitted using the same broadband router settings as when transmitting JPEG images.
		On The H.264 images are transmitted using the HTTP port. For details on setting the HTTP port number, see the following page. **HTTP port" (see page 142)
		Off
		The H.264 images are transmitted using the UDP port.
		When [On] is set, only [Unicast port (AUTO)] can be selected as the [Transmission type] setting.
		When [On] is set, it takes a few seconds before the H.264 images are displayed.
		When this is set to [On], H.264 images may not appear depending on the number of users accessing the unit at the same time and whether audio data exists.

Item	Setting value	Setting details
Image capture size	• H264(1) 1920 x 1080 1280 x 720 • H264(2) 1920 x 1080 1280 x 720 640 x 360 320 x 180 160 x 90 • H264(3) 1280 x 720 640 x 360 320 x 180 160 x 90 • H264(4) 1280 x 720 640 x 360 320 x 180 320 x 180 160 x 90	Select the resolution for H.264 images. Selectable options will vary depending on the selected resolution setting.
Transmission priority	160 x 90 Constant bit rate Frame rate Best effort Advanced VBR	Set the transmission mode for H.264 images. Constant bit rate Transmits H.264 images at the bit rate specified in [Max bit rate (per client)].
		Frame rate Transmit H.264 images at the frame rate specified in [Frame rate].
		Best effort Transmit H.264 images at a variable bit rate between the maximum and minimum specified in [Max bit rate (per client)], according to the network bandwidth.
		Advanced VBR Transmit H.264 images at the frame rate specified in [Frame rate]. Images will be transmitted so that the average transmission volume during the duration specified in [Control time period] will be the bit rate specified in [Max bit rate (per client)].
		When [Transmission priority] is set to [Frame rate] or [Advanced VBR], the number of users that can connect may decrease.
Burst tolerance level	High Middle	Select how much more than the [Max bit rate (per client)] value to allow for the H.264 bit rate.
	Low	This setting is only enabled when [Transmission priority] is set to [Advanced VBR].
Control time period	1h 6h 24h 1week	Select the duration for which the H.264 bit rate will be controlled. Images will be transmitted so that the average transmission volume during the duration specified will be the bit rate specified in [Max bit rate (per client)].
		1h 1 hour 6h 6 hour
		24h 1 day (24 hours)
		1week 1 week
		This setting is only enabled when [Transmission priority] is set to [Advanced VBR].

Item	Setting value	Setting details
Frame rate	• 59.94 Hz	Set the frame rate for H.264 images.
	5fps 15fps 30fps 60fps • 50 Hz 5fps 12.5fps 25fps	 The [Frame rate] is limited by the [Max bit rate (per client)] setting. The actual frame rate may be lower than the specified value. This setting is only enabled when [Transmission priority] is set to [Frame rate] or [Advanced VBR]. [H.264(1)] is fixed at 60 fps (for 59.94 Hz) and 50 fps (for 50 Hz). 60 fps (for 59.94 Hz) and 50 fps (for 50 Hz) cannot be selected
	50fps	for [H.264(2)] to [H.264(4)].
Max bit rate (per client)	64kbps 128kbps 256kbps 384kbps 512kbps 768kbps 1024kbps 1536kbps 2048kbps 3072kbps 4096kbps 6144kbps 8192kbps 10240kbps 12288kbps 14336kbps 16384kbps 20480kbps 24576kbps	Specify the H.264 bit rate per client. When [Transmission priority] is set to [Best effort], specify the maximum and minimum bit rate. • The H.264 bit rate is limited by [Bandwidth control (bitrate)] under the [Network] tab of the [Network] screen. With a bit rate other than [64kbps], the actual bit rate may be lower than the specified value. • "Bandwidth control(bitrate)" (see page 143) • The range of H.264 bit rates that can be specified varies depending on the resolution. • 160×90: 64kbps to 2048kbps • 320×180, 640×360: 64kbps to 4096kbps • 1280×720: 256kbps to 8192kbps • 1920×1080: 512kbps to 14336kbps • 1920×1080 (60fps), 1280×720 (60fps): 1024kbps to 24576kbps • Factory settings H.264(1): 4096kbps H.264(2): 1536kbps H.264(3): 1024kbps H.264(4): 512kbps
Image quality	Low (Motion priority) Normal Fine (Image quality priority)	Select the image quality for H.264 images. This setting is only enabled when [Transmission priority] is set to [Constant bit rate] or [Best effort].
Refresh interval	• 59.94 Hz 0.2s 0.25s 0.33s 0.5s 1s 2s 3s 4s 5s • 50 Hz 0.2s 0.5s 1s 2s 3s 4s 5s	Set the refresh interval for H.264 images (I-frame interval: 0.2 to 5 seconds). If errors occur frequently in the network environment, decreasing the refresh interval will reduce image distortions. However, the frame rate may decrease.

Item	Setting value	Setting details
Transmission type	Unicast port (AUTO)	Set the transmission format for H.264 images.
Unicast port (MANUAL) Multicast port	. , ,	Unicast port (AUTO) Up to 14 users can access a single camera at the same time. [Unicast port] will be configured automatically when images are sent from the camera. We recommend selecting the [Unicast port (AUTO)] setting when the port number transmitting the H.264 images does not need to be fixed (e.g., during use within a network).
		Unicast port (MANUAL) Up to 14 users can access a single camera at the same time. [Unicast port] must be configured manually when images are sent from the camera. When transmitting H.264 images via the Internet, configure a fixed transmission port number for the broadband router (hereafter referred to as "router"). ■ "HTTP port" (see page 142) For details, refer to the operating instructions for the router.
		Multicast port An unlimited number of users can access a single camera at the same time. When transmitting H.264 images via multicast, enter the [Multicast address], [Multicast port], and [Multicast TTL/HOPLimit]. When transmitting H.264 images via multicast, use a multicast-compatible router, and specify the transmission destination. In such cases, configure settings so that H.264 images are not transmitted to other connected devices (e.g., AK-HRP1000). IP communication with the camera may be disabled if you transmit H.264 images to the AK-HRP1000. Maximum number of simultaneous accesses Up to 14 users (consisting of users receiving H.264 images and users receiving JPEG images) can access the unit at the same time. However, depending on the settings for the [Bandwidth control(bit rate)] and [Max bit rate (per client)], the number of users who can access the unit may be limited to less than 14. A message indicating the access limit will appear if the number of users exceeds 14. When [Transmission type] is set to [Multicast port] for [H.264], the second and subsequent users receiving H.264 images will not be counted toward the total access count.
Unicast port	1024 to 50000	Set the unicast port number (used when sending images from the unit). This needs to be set when [Transmission type] is set to [Unicast port(MANUAL)]. • Factory settings
		H.264 (1): 32004 H.264 (2): 32014 H.264 (3): 32024 H.264 (4): 32034 • Only even numbers can be specified. • The port number cannot be set to 10670.
Multicast address	224.0.0.0 to 239.255.255.255	Set the multicast IP address. Images will be sent to the specified IP address. This needs to be set when [Transmission type] is set to [Multicast port]. • Factory settings H.264 (1): 239.192.0.20 H.264 (2): 239.192.0.21 H.264 (3): 239.192.0.22 H.264 (4): 239.192.0.23
		Verify the usable multicast IP addresses before setting this.

Item	Setting value	Setting details
Multicast port	1024 to <u>37004</u> to 50000	Enter the multicast port number (used when sending images from the unit). This needs to be set when [Transmission type] is set to [Multicast port].
		Only even numbers can be specified.
		The port number cannot be set to 10670.
Multicast TTL/HOP Limit	1 to <u>16</u> to 254	Enter the TTL/HOP Limit value for multicast. This needs to be set when [Transmission type] is set to [Multicast port].
		When transmitting H.264 images via the Internet, transmitted images may not appear depending on proxy server settings, firewall settings, etc. In such cases, consult your network administrator.
		When displaying multicast images on a personal computer with multiple LAN cards installed, disable the LAN cards that are not used for reception.

[User mng.] screen

The users and personal computers (IP addresses) that can access the unit from personal computers are registered in the [User mng.] screen.

The [User mng.] screen consists of [User auth.] tab and [Host auth.] tab.

[User auth.] tab

Click the [User auth.] tab of [User mng.] screen.

Configure the user authorization settings for the personal computers that can access the unit.

Up to 18 users can be registered.

• If user authentication fails more than 8 times within a 30-second period from the same IP address (personal computer), access to the unit will be disabled for a certain period.

Item	Setting value	Setting details
User auth.	On	Set whether to perform user authorization.
	Off	On Perform user authentication.
		Off Do not perform user authentication.
Authentication	Digest or Basic Digest Basic	Specify the method of user authentication to use. The authorization configured here is used for authentication when accessing the web screen. Digest authentication will always be used for connection with the controller.
		Digest or Basic Use digest authentication or basic authentication.
		Digest Use digest authentication.
		Basic Use basic authentication.
		 If you change the [Authentication] setting, close the web browser and perform access again.
User name		Enter the user name.
		Maximum number of characters 1 to 32 half-size characters
		• Invalid characters Full-size and half-size ":; & \ symbols
		If you enter a new name for a registered user and click the [Set] button, the user information will be overwritten.
Password		Enter the password.
Retype password		Maximum number of characters 4 to 32 half-size characters
		Invalid characters Full-size and half-size " &

Item	Setting value	Setting details
Access level	1. Administrator 2. Live only	Select one of the following settings as the user access level. 1. Administrator This access level allows the user to perform all the unit's operations. 2. Live only This access level enables only [Live] screen to be displayed. The unit cannot be operated or set.
User check		You can view registered users by clicking [▼] for [User check]. A registered user is indicated in the form of "Registered user name [Access level]." (Example: admin[1]) You can delete selected users by clicking the [Delete] button at the right.

[Host auth.] tab

Click the [Host auth.] tab of [User mng.] screen.

Configure the host authorization settings that restrict the personal computers (IP addresses) that can access the unit.

Item	Setting value	Setting details
Host auth.	On	Set whether to perform host authorization.
	Off	On Perform host authentication.
		Off Do not perform host authentication.
IP address		The IP address of the personal computer from which access to the unit is allowed is input here. The host name cannot be input as the IP address.
		When the "IP address/subnet mask length" is input, the personal computers which are allowed to access the camera can be restricted on a subnet by subnet basis. If, for instance, "192.168.0.1/24" has been input and the [1. Administrator] setting has been selected as the [Access level] setting, the personal computers from "192.168.0.1" to "192.168.0.254" will be able to access the camera at the [1. Administrator] access level.
		When an already registered IP address is input and the [Set] button is clicked, the host information will be overwritten.
Access level	1. Administrator	Set the host access level.
	2. Live only	Administrator This access level allows the user to perform all the unit's operations.
		Live only This access level enables only [Live] screen to be displayed. The unit cannot be operated or set.
Host check		You can view registered host IP addresses by clicking [▼] for [Host check]. A host is indicated in the form of "Registered IP address [Access level]." (Example: 192.168.0.21 [1]) You can delete selected hosts (IP addresses) by clicking the [Delete] button at the right.

[Network] screen

Configure network settings in the [Network] screen.

- The following information is required to configure network settings. Consult your network administrator or Internet service provider.
 - IP address
 - Subnet mask
 - Default gateway (when using a gateway server or router)
 - HTTP port

IPv4 network

Item	Setting value	Setting details
IP address(IPv4)	192.168.0.20	Enter the IP address of the unit. Input an address that will not duplicate an existing IP address which has been set for a personal computer or another network camera.
Subnet mask	255.255.255.0	Enter the subnet mask of the unit.
Default gateway	192.168.0.1	Enter the default gateway of the unit.
		Multiple IP addresses cannot be used for the default gateway.

Common

Item	Setting value	Setting details
HTTP port	1 to <u>80</u> to 65535	Individually assign the HTTP port numbers (i.e., port numbers used for access from a web browser).
		The following port numbers are used by the unit so they cannot be used. 20 / 21 / 23 / 25 / 42 / 53 / 67 / 68 / 69 / 110 / 123 / 161 / 162 / 443 / 554 / 995 / 10669 / 10670 / 49152 / 49200 to 49299 / 59000 to 61000
ROP port	49152 49200 to 49299	Individually assign the port numbers used for connecting to the ROPs.
Line speed	Auto 100M-Full 100M-Half 10M-Full 10M-Half	Set the data line speed. Auto The line speed is set automatically. 100M-Full 100 Mbps full duplex 100M-Half 100 Mbps half duplex 10M-Full 10 Mbps full duplex 10M-Full 10 Mbps full duplex
		Normally, it is recommended that the [Auto] default setting be used.

Item	Setting value	Setting details
Max RTP packet size	Unlimited (1500byte) Limited (1280byte)	Specify whether to limit the size of RTP packets sent from the camera when using RTP to view camera images. Unlimited (1500byte) Unlimited (1500 byte)
		Limited (1280byte) Limited (1280 byte)
		Normally, it is recommended that the [Unlimited(1500byte)] default setting be used.
		Select [Limited(1280byte)] when the packet size of the used communication line is limited. For details on the maximum packet size of communication lines, consult your network administrator.
HTTP max segment size(MSS)	Unlimited (1460byte) Limited (1280byte)	Select whether to limit the maximum segment size (MSS) transmitted by a camera when viewing camera images using HTTP.
	Limited (1024byte)	Unlimited (1460byte) Unlimited (1460 byte)
		Limited (1280byte) Limited (1280 byte)
		Limited (1024byte) Limited (1024 byte)
		Normally, it is recommended that the [Unlimited(1460byte)] default setting be used.
		Select [Limited(1024byte)] or [Limited(1280byte)] when the maximum segment size (MSS) of the used communication line is limited. For details on the maximum segment size (MSS) of communication lines, consult your network administrator.
Bandwidth control(bitrate)	Unlimited 64kbps 128kbps 256kbps 384kbps 512kbps 768kbps 1024kbps 2048kbps 4096kbps 8192kbps	Set the amount of data to be distributed. When [Bandwidth control (bitrate)] is set to a low value, the SnapShot button may not work depending on the use environment. In such a case, select [JPEG] with the [Compression] button in the [Live] screen and execute SnapShot when distributing images in the smallest resolution.
Easy IP Setup accommodate period	20min Unlimited	Set the time for enabling the operation of the network settings from the Easy IP Setup Software.
		20min The setting operations from the Easy IP Setup Software are enabled for 20 minutes after the unit has started.
		Unlimited The camera setting operations from the Easy IP Setup Software are enabled at all times.
		The camera screen can be opened because the camera display in the Easy IP Setup Software is constantly enabled.
		For details on the address settings of each server, consult you network administrator.

Item	Setting value	Setting details
Recommended network setting for internet		Perform the recommended settings to connect the camera to the Internet.
		Clicking the [Set] button displays a dialog box telling the user that item settings will be changed. After confirming this, click the [OK] button.
		• [Image] screen JPEG (1) Image capture size: 640×360 JPEG (2) Image capture size: 320×180 JPEG (3) Image capture size: 160×90 H.264 (1) · H.264 (2) · H.264 (3) · H.264 (4) [Windows] Internet mode (over HTTP): On Transmission priority: Best effort H.264 (1) [Windows] Image capture size: 1280×720 Max bit rate (per client): Max1024 kbps, Min1024 kbps H.264 (2) [Windows] Image capture size: 640×360 Max bit rate (per client): Max1024 kbps, Min128 kbps H.264 (3) [Windows] Image capture size: 320×180 Max bit rate (per client): Max1024 kbps, Min128 kbps H.264 (4) [Windows] Image capture size: 320×180 Max bit rate (per client): Max1024 kbps, Min128 kbps H.264 (4) [Windows] Image capture size: 160×90 Max bit rate (per client): Max1024 kbps, Min128 kbps • [Network] screen Max RTP packet size: Limited (1280 byte) HTTP max segment size (MSS): Limited (1280 byte)

[Maintenance] screen

Among the various maintenance operations performed on this screen are system log checks, software version check and initialization of the unit.

The Maintenance screen consists of three tabs: [Product info.], [Default reset] and [Back up].

[Product info.] tab

The versions of the unit's software can be checked on this screen.

The [Model no.], [MAC address], [Firmware version] and other information about the unit is displayed.

Item	Display description
Model no.	Display the unit's model number.
MAC address	Display the unit's MAC address.
Firmware version	CPU Software - SOFTWARE Display the software version of this unit.
	CPU Software - NETWORK Display the software version of the network.
	FPGA - UHD FPGA Display the image processing (4K) FPGA version.
	FPGA - HS FPGA Display the image processing (HS) FPGA version.
	FPGA - RETURN FPGA1 Display the return image processing FPGA1 version.
	FPGA - RETURN FPGA2 Display the return image processing FPGA2 version.
	FPGA - MAIN FPGA Display the FPGA version of this unit.
	FPGA - INCOM FPGA Display the power and audio management FPGA version.
	FPGA - USC FPGA Display the UHD output conversion FPGA version.
Viewer software installation counter	The number of plug-in viewer software applications which have been installed automatically from the unit is displayed by this counter.

[Default reset] tab

The unit's setting data or HTML is initialized and the unit is restarted on this screen.

Item	Setting details
Reset to the default (Except the network	When the [Execute] button is clicked, the unit's settings are returned to their defaults.
settings)	The login user name and password will also return to their defaults (admin/12345).
	When the initialization operation is started, no operations can be undertaken for about 3 minutes.
	 The following setting items will not be returned to defaults. All settings under [IPv4 network] [HTTP port] [Line speed] [Bandwidth control (bit rate)]

[Back up] tab

On this screen, the unit's network settings can be saved to a personal computer or settings stored on a personal computer can be applied on the unit.

Item	Setting details	
Download	Save the unit's network settings to a personal computer. **Saving the unit's network settings to a personal computer [Download]" (see page 146)	
Upload	Upload a unit configuration file that was saved to a personal computer with the download function. **Applying settings stored on a personal computer to the unit [Upload]" (see page 146)	

Saving the unit's network settings to a personal computer [Download]

Follow the procedure below to save the unit's network settings to a personal computer.

- Do not turn off the unit's power during downloading.
- Do not attempt to perform any operations during downloading. Wait until downloading is completed.
- 1. Click the [Execute] button of [Download].

The save destination dialog box appears.

2. Specify the save destination folder and then click the [OK] button.

The data is saved.

Applying settings stored on a personal computer to the unit [Upload]

Follow the procedure below to upload a unit configuration file that was saved to a personal computer with the download function [Download] and then apply the settings on the unit.

- For the data to use for uploading, use a file downloaded with the unit.
 Furthermore, do not change the extension (.ndt) of the downloaded file.
- Do not turn off the unit's power during uploading.
- Do not attempt to perform any operations during uploading. Wait until uploading is completed.
- 1. Click the [Browse] button of [Upload], and specify the downloaded software.
- 2. Click the [Execute] button.

A message dialog box appears.

3. Click the [OK] button.

Uploading begins.

A message dialog box appears when uploading completes.

4. Click the [OK] button.

The unit restarts automatically.

Web Screen (AK-NP600)

Network settings

Software

Download EasyIP Setup Tool Plus from the following website and then install them. [Windows]

 Download URL https://pro-av.panasonic.net/en/

EasylP Setup Tool Plus

This software sets the unit's network settings.

→ "Using EasyIP Setup Tool Plus to set the unit's settings" (see page 147)

Using EasyIP Setup Tool Plus to set the unit's settings

The settings related to the unit's network can be set using the supplied EasyIP Setup Tool Plus.

When multiple of this unit are to be set, they each need to be set individually.

If setting cannot be done using the EasyIP Setup Tool Plus, make the individual settings for this unit and the personal computer in [MAINTENANCE] > [NETWORK(MOIP)] > [1GbE] in the CCU menu.

*NETWORK(1GbE)" (see page 107)

- If, after the network settings have been set, another device on the same network has the same IP address, the network operations
 will not be performed properly. Set the IP address in such a way that it does not duplicate an existing IP address.
- Do not set network settings from a multiple number of EasyIP Setup Tool Plus programs at the same time for a single camera.

 When connected from more than one PC, the settings of this unit can only be changed from the PC that was connected first.
- EasyIP Setup Tool Plus cannot be used from a different subnet via a router.
- Changes to the settings of this unit using the EasyIP Setup Tool Plus are performed with authentication from an account in the web screen, therefore changes are not possible if the initial account for the web screen is not yet set.
 - → "Displaying the web screen using a personal computer" (see page 149)

Setting Procedure

- 1. Start the EasyIP Setup Tool Plus.
- 2. Click the [Search] button.

· You can set the Network to be used for the search in the selection menu at the top of the screen.

3. Select the camera to configure and click the [Network Settings] button.

- The web screen for the selected camera is displayed when you click the [Web GUI] button.
- 4. Input the network items, and click the [Setup] button.

- Port No. settings are not supported, so do not set.
- 5. Enter the user name and password registered in the web screen (AK-NP600), then click the [OK] button.

- Enter the user name and password that was set for the initial account or was set in the User management screen [User mng.] in the web screen.
 - → "Displaying the web screen using a personal computer" (see page 149)
 - → "User management screen [User mng.]" (see page 170)
- After the [OK] button is clicked, it takes about 2 minutes for the settings in the unit to be completed. If this unit is turned off
 or the LAN cable is disconnected before the settings are completed, the settings will be invalidated. In this case, repeat
 the steps to set the settings.

NOTE

- The unit does not support IPv6.
- This unit does not support "Administrator Registration", and "Firmware Update" from EasyIP Setup Tool Plus.
- When a firewall (including software) has been introduced, enable access to all the UDP ports.
- For details about EasyIP Setup Tool Plus, refer to the Help page.

Displaying the web screen (AK-NP600)

Connect the LAN2 connector on this unit and a personal computer and make a variety of settings in a web browser.

Use a LAN crossover cable to directly connect the LAN2 connector on this unit and a personal computer. When connecting via a switching hub, etc., use a LAN straight cable.

Notice regarding the Web screen

IP address and subnet mask

Select an IP address for the personal computer within the private address range while ensuring that it is different from the address of the unit. Set the subnet mask to the same address as the unit.

. Unit's IP address and subnet mask (factory settings)

IP address	192.168.0.52
Subnet mask	255.255.255.0

• In the factory settings, the variable range for private addresses is between 192.168.0.1 and 192.168.0.255.

Personal computer environment required to display the Web screen

For details on the personal computer environment required to display the Web screen, refer to following page.

"Personal computer requirements" (see page 11)

Displaying the web screen using a personal computer

Screens from Windows (Microsoft Edge) are used as examples in this manual. There will be some differences in how the screen appears in other browsers, but the procedures will be the same.

1. Start the web browser of the personal computer.

Use one of the web browsers below depending on the operating system installed in the personal computer.

Installed OS	Web browser
Windows	Microsoft Edge
	Internet Explorer 11
	Google Chrome
macOS	Safari

Enter the IP address you configured on the EasyIP Setup Tool Plus in the address bar of the web browser.

 Example of input http://registered URL http://192.168.0.52

 If this unit is within a local network, make the settings for the proxy server from the web browser so that the proxy server is not used for the local address.

3. Sets the initial account.

If the web screen is set to be shown in the initial state, the initial account setting screen is displayed.

Set the user name and password.

- Do not use a string of characters that can be easily guessed by a third party.
- Change your password regularly.
- Use at least 3 of the following 4 character types in a password of at least 8-characters in length.
 - · Upper case alphabet
 - · Lower case alphabet
 - Numbers
 - Symbols (! # \$ % ' () * + , . / ? @ [] ^ _ ` ~)
- If a password is set that does not follow the above policy, the user assumes responsibility for operation, with an adequate understanding of the security risks to the installation environment, etc.
- A warning message is displayed if you set a password that does not meet the recommended setting policy. To change the
 password, click the [Back] button and enter another password.
 To continue the settings after understanding the risk to security, click [Continue] and then complete the settings.
- If you have forgotten the account information you set, execute [SYSTEM] > [FACTORY INITIALIZE] in the CCU menu, and reset the user information used for network connections.

The settings for this unit return to the factory settings when you execute [FACTORY INITIALIZE].

➡ "Initialize the Unit Settings (INITIALIZE)" (see page 116)

4. Complete registration of the initial account.

The following screen indicating registration completion is displayed after registration of the initial account is complete.

After about 10 seconds of showing this completion screen, the settings screen is automatically shown. If the screen does not transition to the settings screen even after 10 seconds have elapsed, click on the link in "please click here" to move to the settings screen manually.

This completes the procedures for registering the initial account.

5. Display the settings screen.

The web screen is displayed.

In the initial screen, the Product information screen [Product info.] is displayed, so switch if necessary.

Logging into the web screen

When the web screen is displayed, you need to enter the account information.

- The account input screen appears as a pop-up window in the web browser.
- Correctly enter the user name and password that were previously registered.
- It is recommended to regularly change the password.

Web setting screen

This screen enables you to make a variety of settings for this unit.

1	Main area	The menu screen appears.
2	Product information button	Click the button to display the Product information screen [Product info.].
	[Product info.]	→ "Product information screen [Product info.]" (see page 153)
3	View system settings button	Click the button to display the View system settings screen [System mode].
	[System mode]	→ "View system settings screen [System mode]" (see page 154)
4	Network settings button	Click the button to display the Network settings screen [Network].
	[Network]	→ "Network settings screen [Network]" (see page 158)
5	User management settings	Click the button to display the User management screen [User mng.].
	button [User mng.]	→ "User management screen [User mng.]" (see page 170)

• If setting values are changed from a menu or another web browser while the settings menu is being displayed, there may be a mismatch between the setting values and the displayed values. If this occurs, refresh the screen displaying the settings menu in the web browser.

Product information screen [Product info.]

The versions of the unit's software can be checked on this screen.

The [Model no.], [Serial no.], [Firmware version] and other information about the unit is displayed.

Item	Display description
Cam_title	AK-NP600 Set the camera name displayed in the header of the web screen (AK-NP600) and in EasyIP Setup Tool Plus.
Model no.	Display the unit's model number.
Serial no.	Displays the unit's serial number.
Firmware version	CAM VERSION Displays the software version of the camera connected to this unit.
	CCU VERSION Displays the overall version of the unit.
	SOFTWARE Displays the version of the application.
	NETWORK Displays the network software version.
	UHD FPGA Displays the version of the FPGA (UHD).
	HS FPGA Displays the version of the FPGA (HS).
	RETURN FPGA1 Displays the version of the FPGA (RETURN1).
	RETURN FPGA2 Displays the version of the FPGA (RETURN2).
	MAIN FPGA Displays the version of the FPGA (MAIN).
	INCOM FPGA Displays the version of the FPGA (INCOM).
	MOIP FPGA Displays the MOIP software version.

View system settings screen [System mode]

The View system settings screen [System mode] enables you to view the related image format, received image information, etc., when this unit is to use MoIP.

The View system settings screen [System mode] consists of [Main], [TX setting status], [Primary RX status], and [Secondary RX status].

Main

Click [Main] in the View system settings screen [System mode].

You can view the basic settings for the unit.

Item	Display description
Format	Displays the CCU format settings.
CCU mode	Displays the settings for the format of the signals output from the CCU.

TX setting status

Click [TX setting status] in the View system settings screen [System mode].

You can view the format of the TX signal source.

Item	Display description	
Video main format	Displays the settings for the format of images output from the main output line.	
Video monitor format	Displays the settings for the format of images output from the monitor.	
HD trunk format	Displays the settings for the format of the HD trunk.	
Audio	Displays the enable/disable settings for audio output.	
Audio format	Displays the settings for audio output format.	

Primary RX status

Click [Primary RX status] in the View system settings screen [System mode].

This will display the received data information for the SFP+ PRIMARY RX signals.

Item	Display description
Return video format	Detect/Undetected Displays whether return images are being received.
	Sampling rate Displays the sampling rate of the received return images.
	Width Displays the horizontal resolution of the received return images.
	Height Displays the vertical resolution of the received return images.
HD prompter format	Detect/Undetected Displays whether HD prompter RX is being received.
	Sampling rate Displays the sampling rate of the received HD prompter RX.
	Width Displays the horizontal resolution of the received HD prompter RX.
	Height Displays the vertical resolution of the received HD prompter RX.
PGM1 format	Detect/Undetected Displays whether PGM1 audio RX is being received.
	Sampling rate Displays the sampling rate of the received PGM1 audio RX.
	Payload type Displays the payload type of the received PGM1 audio RX.

Item	Display description
PGM2 format	Detect/Undetected Displays whether PGM2 audio RX is being received.
	Sampling rate Displays the sampling rate of the received PGM2 audio RX.
	Payload type Displays the payload type of the received PGM2 audio RX.
INCOM1 format	Detect/Undetected Displays whether INCOM1 audio RX is being received.
	Sampling rate Displays the sampling rate of the received INCOM1 audio RX.
	Payload type Displays the payload type of the received INCOM1 audio RX.
INCOM2 format	Detect/Undetected Displays whether INCOM2 audio RX is being received.
	Sampling rate Displays the sampling rate of the received INCOM2 audio RX.
	Payload type Displays the payload type of the received INCOM2 audio RX.

Secondary RX status

Click [Secondary RX status] in the View system settings screen [System mode].

This will display the received data information for the SFP+ Secondary RX signals.

Item	Display description
Return video format	Detect/Undetected Displays whether return images are being received.
	Sampling rate Displays the sampling rate of the received return images.
	Width Displays the horizontal resolution of the received return images.
	Height Displays the vertical resolution of the received return images.
HD prompter format	Detect/Undetected Displays whether HD prompter RX is being received.
	Sampling rate Displays the sampling rate of the received HD prompter RX.
	Width Displays the horizontal resolution of the received HD prompter RX.
	Height Displays the vertical resolution of the received HD prompter RX.
PGM1 format	Detect/Undetected Displays whether PGM1 audio RX is being received.
	Sampling rate Displays the sampling rate of the received PGM1 audio RX.
	Payload type Displays the payload type of the received PGM1 audio RX.
PGM2 format	Detect/Undetected Displays whether PGM2 audio RX is being received.
	Sampling rate Displays the sampling rate of the received PGM2 audio RX.
	Payload type Displays the payload type of the received PGM2 audio RX.
INCOM1 format	Detect/Undetected Displays whether INCOM1 audio RX is being received.
	Sampling rate Displays the sampling rate of the received INCOM1 audio RX.
	Payload type Displays the payload type of the received INCOM1 audio RX.
INCOM2 format	Detect/Undetected Displays whether INCOM2 audio RX is being received.
	Sampling rate Displays the sampling rate of the received INCOM2 audio RX.
	Payload type Displays the payload type of the received INCOM2 audio RX.

Network settings screen [Network]

Make settings related to the network for AK-NP600 in the Network settings screen [Network].

The Network settings screen [Network] consists of [SFP+ primary], [SFP+ primary TX], [SFP+ primary RX], [SFP+ secondary], [SFP+ secondary TX], [SFP+ secondary TX], [IGbE], [Tally in setting], [PTP setting], [NMOS setting], and [Common].

SFP+ primary

Click [SFP+ primary] in the Network settings screen [Network].

Make network settings for the [SFP+1] slot (SFP+ primary) for MoIP input/output.

Confirm the settings with the [Set] button.

The following information is required to configure network settings. Consult your network administrator or Internet service provider.

- IP address
- Port
- Subnet mask
- Default gateway (when using a gateway server or router)

Item	Setting value	Setting details
DHCP	ON OFF	Select the method for setting the SFP+ primary IP addresses.
IP address	192.168.0.50	When not using the DHCP function, enter the SFP+ primary IP addresses. Enter so that the address does not duplicate the IP addresses of the personal computer or other network cameras.
Port	49300 (1024 to 50000)	Enter the SFP+ primary port numbers.
Subnet mask	255.255.255.0	When not using the DHCP function, enter the SFP+ primary subnet masks.
Default gateway	192.168.0.1	When not using the DHCP function, set the SFP+ primary default gateways.
Mac address	Display only	Display the SFP+ primary MAC addresses.

SFP+ primary TX

Click [SFP+ primary TX] in the Network settings screen [Network].

Make network settings for the SFP+ primary TX signal.

Confirm the settings with the [Set] button.

__ indicates factory default settings.

Item	Setting value	Setting details
Main video TX	 IP address 224.1.0.1 Port 49301 (1024 to 50000, 10670 is prohibited) 	IP address Enter the IP address for Main video TX. Port Enter the port number for Main video TX.
Monitor video TX	 IP address 224.1.0.2 Port 49302 (1024 to 50000, 10670 is prohibited) 	IP address Enter the IP address for Monitor video TX. Port Enter the port number for Monitor video TX.
HD trunk TX	 IP address 224.1.0.10 Port 49310 (1024 to 50000, 10670 is prohibited) 	IP address Enter the IP address for HD trunk TX. Port Enter the port number for HD trunk TX.
MIC1 audio TX	 IP address 224.1.0.3 Port 49303 (1024 to 50000, 10670 is prohibited) 	IP address Enter the IP address for MIC1 audio TX. Port Enter the port number for MIC1 audio TX.
MIC2 audio TX	 IP address 224.1.0.11 Port 49311 (1024 to 50000, 10670 is prohibited) 	IP address Enter the IP address for MIC2 audio TX. Port Enter the port number for MIC2 audio TX.

Item	Setting value	Setting details
INCOM1 audio TX	 IP address 224.1.0.12 Port 49312 (1024 to 50000, 10670 is prohibited) 	IP address Enter the IP address for INCOM1 audio TX. Port Enter the port number for INCOM1 audio TX.
INCOM2 audio TX	 IP address 224.1.0.13 Port 49313 (1024 to 50000, 10670 is prohibited) 	IP address Enter the IP address for INCOM2 audio TX. Port Enter the port number for INCOM2 audio TX.

SFP+ primary RX

Click [SFP+ primary RX] in the Network settings screen [Network].

Make network settings for the SFP+ primary RX signal.

Confirm the settings with the [Set] button.

Item	Setting value	Setting details
Return video RX	Multicast address 224.1.0.4	Multicast address Enter the multicast address for return images.
	• Source address 0.0.0.0	Source address Enter the source IP address for return images.
	● Port <u>49304</u> (1024 to 50000, 10670 is prohibited)	Port Enter the port number for return images.
HD prompter RX	 Multicast address 224.1.0.14 Source address 	Multicast address Enter the multicast address for HD PROMPTER RX. Source address
	0.0.0.0	Enter the source IP address for HD PROMPTER RX.
	Port 49314 (1024 to 50000, 10670 is prohibited)	Port Enter the port number for HD PROMPTER RX.

Item	Setting value	Setting details
PGM1 audio RX	 Multicast address <u>224.1.0.16</u> Source address <u>0.0.0.0</u> Port <u>49316</u> (1024 to 50000, 10670 is prohibited) 	Multicast address Enter the multicast address for PGM1 audio RX. Source address Enter the source IP address for PGM1 audio RX. Port Enter the port number for PGM1 audio RX.
PGM2 audio RX	 Multicast address <u>224.1.0.17</u> Source address <u>0.0.0.0</u> Port <u>49317</u> (1024 to 50000, 10670 is prohibited) 	Multicast address Enter the multicast address for PGM2 audio RX. Source address Enter the source IP address for PGM2 audio RX. Port Enter the port number for PGM2 audio RX.
INCOM1 audio RX	 Multicast address <u>224.1.0.18</u> Source address <u>0.0.0.0</u> Port <u>49318</u> (1024 to 50000, 10670 is prohibited) 	Multicast address Enter the multicast address for INCOM1 audio RX. Source address Enter the source IP address for INCOM1 audio RX. Port Enter the port number for INCOM1 audio RX.
INCOM2 audio RX	 Multicast address <u>224.1.0.19</u> Source address <u>0.0.0.0</u> Port <u>49319</u> (1024 to 50000, 10670 is prohibited) 	Multicast address Enter the multicast address for INCOM2 audio RX. Source address Enter the source IP address for INCOM2 audio RX. Port Enter the port number for INCOM2 audio RX.

SFP+ secondary

Click [SFP+ secondary] in the Network settings screen [Network].

Make network settings for the [SFP+2] slot (SFP+ secondary) for MoIP input/output.

Confirm the settings with the [Set] button.

The following information is required to configure network settings. Consult your network administrator or Internet service provider.

- IP address
- Port
- Subnet mask
- Default gateway (when using a gateway server or router)

Item	Setting value	Setting details
DHCP	ON OFF	Select the method for setting the SFP+ secondary IP addresses.
IP address	192.168.0.51	When not using the DHCP function, enter the SFP+ secondary IP addresses. Enter so that the address does not duplicate the IP addresses of the personal computer or other network cameras.
Port	49309 (49300 to 49999)	Enter the SFP+ secondary port numbers.
Subnet mask	255.255.255.0	When not using the DHCP function, enter the SFP+ secondary subnet masks.
Default gateway	192.168.0.1	When not using the DHCP function, set the SFP+ secondary default gateways.
Mac address	Display only	Display the SFP+ secondary MAC addresses.

SFP+ secondary TX

Click [SFP+ secondary TX] in the Network settings screen [Network].

Make network settings for the SFP+ secondary TX signal.

Confirm the settings with the [Set] button.

___ indicates factory default settings.

Item	Setting value	Setting details
Main video TX	 IP address 224.1.0.5 Port 49305 (1024 to 50000, 10670 is prohibited) 	IP address Enter the IP address for Main video TX. Port Enter the port number for Main video TX.
Monitor video TX	 IP address 224.1.0.6 Port 49306 (1024 to 50000, 10670 is prohibited) 	IP address Enter the IP address for Monitor video TX. Port Enter the port number for Monitor video TX.
HD trunk TX	 IP address 224.1.0.20 Port 49320 (1024 to 50000, 10670 is prohibited) 	IP address Enter the IP address for HD trunk TX. Port Enter the port number for HD trunk TX.
MIC1 audio TX	 IP address 224.1.0.7 Port 49307 (1024 to 50000, 10670 is prohibited) 	IP address Enter the IP address for MIC1 audio TX. Port Enter the port number for MIC1 audio TX.
MIC2 audio TX	 IP address 224.1.0.21 Port 49321 (1024 to 50000, 10670 is prohibited) 	IP address Enter the IP address for MIC2 audio TX. Port Enter the port number for MIC2 audio TX.

Item	Setting value	Setting details
INCOM1 audio TX	 IP address 224.1.0.22 Port 49322 (1024 to 50000, 10670 is prohibited) 	IP address Enter the source IP address for INCOM1 audio TX. Port Enter the port number for INCOM1 audio TX.
INCOM2 audio TX	 IP address <u>224.1.0.23</u> Port <u>49323</u> (1024 to 50000, 10670 is prohibited) 	IP address Enter the source IP address for INCOM2 audio TX. Port Enter the port number for INCOM2 audio TX.

SFP+ secondary RX

Click [SFP+ secondary RX] in the Network settings screen [Network].

Make network settings for the SFP+ secondary RX signal.

Confirm the settings with the [Set] button.

Item	Setting value	Setting details
Return video RX	Multicast address 224.1.0.8	Multicast address Enter the multicast address for return images.
	Source address 0.0.0.0	Source address Enter the source IP address for return images.
	● Port <u>49308</u> (1024 to 50000, 10670 is prohibited)	Port Enter the port number for return images.
HD prompter RX	• Multicast address 224.1.0.24	Multicast address Enter the multicast address for HD PROMPTER RX.
	• Source address 0.0.0.0	Source address Enter the source IP address for HD PROMPTER RX.
	• Port <u>49324</u> (1024 to 50000, 10670 is prohibited)	Port Enter the port number for HD PROMPTER RX.

Item	Setting value	Setting details
PGM1 audio RX	 Multicast address <u>224.1.0.26</u> Source address <u>0.0.0.0</u> Port <u>49326</u> (1024 to 50000, 10670 is prohibited) 	Multicast address Enter the multicast address for PGM1 audio RX. Source address Enter the source IP address for PGM1 audio RX. Port Enter the port number for PGM1 audio RX.
PGM2 audio RX	 Multicast address <u>224.1.0.27</u> Source address <u>0.0.0.0</u> Port <u>49327</u> (1024 to 50000, 10670 is prohibited) 	Multicast address Enter the multicast address for PGM2 audio RX. Source address Enter the source IP address for PGM2 audio RX. Port Enter the port number for PGM2 audio RX.
INCOM1 audio RX	 Multicast address 224.1.0.28 Source address 0.0.0.0 Port 49328 (1024 to 50000, 10670 is prohibited) 	Multicast address Enter the multicast address for INCOM1 audio RX. Source address Enter the source IP address for INCOM1 audio RX. Port Enter the port number for INCOM1 audio RX.
INCOM2 audio RX	 Multicast address <u>224.1.0.29</u> Source address <u>0.0.0.0</u> Port <u>49329</u> <u>(1024 to 50000, 10670 is prohibited)</u> 	Multicast address Enter the multicast address for INCOM2 audio RX. Source address Enter the source IP address for INCOM2 audio RX. Port Enter the port number for INCOM2 audio RX.

1GbE

Click [1GbE] in the Network settings screen [Network].

Make network settings for the 1GbE (LAN2) for AK-NP600.

Confirm the settings with the [Set] button.

The following information is required to configure network settings. Consult your network administrator or Internet service provider.

- IP address
- Port
- Subnet mask
- Default gateway (when using a gateway server or router)
- Primary server address, secondary server address, and domain for DNS (when using DNS)

Item	Setting value	Setting details
DHCP	ON OFF	Select the method for setting the 1GbE (LAN2) IP addresses.
IP address	192.168.0.52	When not using the DHCP function, enter the 1GbE (LAN2) IP addresses. Enter so that the address does not duplicate the IP addresses of the personal computer or other network cameras.
Port	49330 (1024 to 50000)	Enter the 1GbE (LAN2) port numbers.
Subnet mask	255.255.255.0	When not using the DHCP function, enter the 1GbE (LAN2) subnet masks.
Default gateway	192.168.0.1	When not using the DHCP function, set the 1GbE (LAN2) default gateways.
Mac address	Display only	Display the 1GbE (LAN2) MAC addresses.
DNS	DNS MANUAL AUTO	DNS Sets whether the DNS server address is to be acquired automatically (AUTO), or to be input manually (MANUAL).
	Primary server address 0.0.0.0	Primary server address Secondary server address
	Secondary server address 0.0.0.0	Domain When using [MANUAL] for [DNS], enter the IP address for the DNS server.
	Domain The default value is blank	Consult the system administrator regarding the DNS server information.

Tally in setting

Click [Tally in setting] in the Network settings screen [Network].

Make settings related to Tally control via TSL Protocol 5.0.

Confirm the settings with the [Set] button.

___ indicates factory default settings.

Item	Setting value	Setting details
Index no.	1 (1 to 65534)	Enter the Index no. set by devices that output Tally.
Port	62000 (60000 to 65535)	Enter the Tally in port number.

• The IP address of Tally in becomes the setting of the connected IP network.

Ex.: When input from SFP+ primary

The SFP+ Primary IP address is enabled

PTP setting

Click [PTP setting] in the Network settings screen [Network].

Make PTP related network settings.

Confirm the settings with the [Set] button.

Item Setting value Setting		Setting details	
Domain	127 (0 to 127)	Sets the DOMAIN number.	
IP address	Display only	Displays the IP address automatically discovered.	

NMOS setting

Click [NMOS setting] in the Network settings screen [Network].

Make NMOS related network settings.

Confirm the settings with the [Set] button.

___ indicates factory default settings.

Item	Setting value	Setting details	
NMOS control	ON OFF	Enables/disables the NMOS function.	
Status	UNREGISTERD REGISTERING REGISTERED P2P MODE (Display only)	Displays the NMOS operation status, such as RDS connection status	
Port(IS-04)	50040 (1024 to 65535)	Sets the port number on the camera for IS-04 Node API.	
Port(IS-05)	50050 (1024 to 65535)	Sets the port number on the camera for IS-05 Node API.	
RDS IP address	Display only	Displays the discovered IP address.	
RDS port	Display only	Displays the port number automatically discovered.	
Label setting	AUTO MANUAL	AUTO The Label prefix cannot be changed. It is fixed to UCU600_***** ("*****" is the last four digits of the Mac address). MANUAL Text can be set in Label prefix.	
Label prefix	UCU600_**** ("****" is the last four digits of the Mac address)	Sets the prefix appended which is shared with NMOS resource names on this unit.	
Discovery	uniDNS mDNS	Sets the method for NMOS resource discovery.	

Common

Click [Common] in the Network settings screen [Network].

Make AK-NP600 shared network settings.

Confirm the settings with the [Set] button.

Item	Setting value	Setting details	
EasyIP Setup accommodate period	20min. Unlimited	Sets the time allowed for network setting operations from EasyIP Setup Tool Plus.	
		20min. Allows camera setting operations on the EasyIP Setup Tool Plus for just 20 minutes after start up of this unit.	
		Unlimited Allows camera setting operations on the EasyIP Setup Tool Plus at any time.	
		Camera display on the EasyIP Setup Tool Plus is enabled all the time, and the camera screen can be opened.	
		Consult the network administrator regarding the address settings for the different servers.	
EasyIP Setup Plus plain text usage	Enable Disable	Sets whether to enable or disable encryption of communications when communicating with EasyIP Setup Tool Plus.	
		Enable Communications are sent and received as plain messages.	
		Disable Communications are sent and received as encrypted messages.	

User management screen [User mng.]

In the User management screen [User mng.], register authentication for users that can access this unit from personal computers and mobile terminals. Up to 3 users can be registered.

The User management screen [User mng.] consists of [User list] and [Add user].

• If user authentication fails more than 8 times within a 30-second period from the same IP address (personal computer), access to the unit will be disabled for a certain period.

User list

Click [User list] in the User management screen [User mng.].

Information about accounts already registered is displayed.

To delete a registered user account, click the [Delete] button to the right of the relevant account.

• If there is 1 registered account, you cannot delete that account.

Add user

Registers a user account.

Item	Setting details
User name	Enter the user name.
	Maximum number of characters 1 to 32 half-size characters
	 Characters that can be entered Half-size numeric characters: 0123456789 Half-size alphabetical characters (upper and lower cases): ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklmnopqrstuvwxyz Symbols: !#\$%'()*+,/?@[]^_`~
Password	Enter the password.
Retype password	Maximum number of characters 4 to 32 half-size characters

Troubleshooting

Operation

Symptom	Cause and Measure			
Cannot turn the power on.	Is the power cable connected to the outlet properly?			
Cannot perform operation from an ROP connected with an IP	Is the power on?If the [POWER] lamp of this unit is off, the power of this unit is not turned on.			
connection.	Is a valid IP address set on the unit?			
	Is the unit you want to operate selected correctly?			
	 Is the ROP connected correctly? Also refer to the operating instructions for the ROP. 			
	 The version of the ROP may need to be upgraded to enable support for the unit. Consult your dealer. 			
Cannot access from a web	Did you use a LAN cable of category 5 or higher for connecting to the [LAN] connector?			
browser	 Is the [LINK] LED of the [LAN] connector lit? If it is not lit, the unit is not connected to the LAN properly or the network of the connection destination is not operating properly. Check the LAN cable for a bad electrical contact and make sure the connections are correct. 			
	 Is the power on? If the [POWER] lamp of this unit is off, the power of this unit is not turned on. 			
	Is a valid IP address set on the unit?			
	Is the wrong IP address being accessed? (Windows) Using the Windows command prompt, execute ping [IP address which has been set in this unit] A reply returned from the unit signifies that there are no problems in operation. If a reply is not received, reboot the unit, and within 20 minutes change the IP address using the Easy IP Setup Software.			
	Is the wrong IP address being accessed? (Mac) Using the OS X terminal, execute > ping -c 10 [IP address which has been set in this unit] A reply returned from the unit signifies that there are no problems in operation. If a reply is not received, reboot the unit, and within 20 minutes change the IP address using the Easy IP Setup Software.			
	 Has 554 been set as the HTTP port number? For the HTTP port number, use a port number other than the following port numbers that are used by the unit. 20, 21, 23, 25, 42, 53, 67, 68, 69, 110, 123, 161, 162, 554, 995, 10669, 10670, 59000 to 59999, 60000 to 61000 			
	 Is the set IP address the same as that of another device? Check out the IP addresses of the unit, access devices (personal computer, controller, etc.) and any other cameras. 			
	 Does the subnet mask setting match the network subnet of the connection destination? Check out the subnet mask settings of the unit and access devices, and then consult with the network administrator. 			
	 Is the Web browser set to "Use a proxy server"? (When the unit and the personal computer are connected to the same subnet) If a proxy server has been set using the [proxy setting] of the web browser, it is recommended that a "Don't use proxy" address be selected as the unit's IP address setting. 			
	 Has the wrong default gateway been set for the unit? (When the unit and personal computer are connected to different subnets) Check out the default gateway that has been set for the unit, and then consult with the network administrator. 			

Symptom	Cause and Measure		
The setting values of the [Setup] screen are not updated	Press the [F5] key on the personal computer keyboard to request the setting values to be obtained. (Windows)		
properly or are not displayed.	Press the [Command] + [R] key on the personal computer keyboard to request the setting values to be obtained. (Mac)		
	Delete the temporary Internet files as described below. (Mac)		
	Select [Safari] - [Empty Cache] in Safari. Click the [Delete] button under [Browsing history].		
	Delete the temporary Internet files as described below. (Windows)		
	 Select [Tools] - [Internet Options] in Internet Explorer. Click [Empty] in the [Are you sure you want to empty the cache?] pop-up screen. 		
	If [Check for newer versions of stored pages] is not set to [Every time I visit the webpage] in the temporary Internet file settings, the Web settings screen may not be displayed properly. (Windows)		
	 Perform the procedure below. 1. Select [Tools] - [Internet Options] in Internet Explorer. 2. Click the [General] tab, and click the [Settings] button under [Browsing history]. 3. In the [Temporary Internet Files and History Settings] dialog box, select the [Every time I visit the webpage] option under [Check for newer versions of stored pages]. 4. Click the [OK] button. 		
	 A port of the unit may be being filtered by, for example, the firewall function of the antivirus software. Change the HTTP port number of the unit to a port number that is not filtered. 		
It is not possible to download the setting files	Has the file download function been disabled? (Windows) Perform the procedure below. Select [Tools] - [Internet Options] in Internet Explorer. Click the [Security] tab, and click the [Custom level] button under [Security level for this zone]. In the [Security Settings] dialog box, select the [Enable] option for [File download]. Select the [Enable] option for [Automatic prompting for the file downloads]. (for Internet Explorer 8 only) Click the [OK] button.		
The authentication screen appears repeatedly	Has the user name or password been changed? If you change the user name and password of the user currently logged in from a separate web browser while the unit is being accessed, the authentication screen appears each time the screen display is changed. Close the web browser, and initiate access to the unit again.		
	Has the method for user authentication been changed? If you change the [User auth.] - [Authentication] setting, close the web browser and initiate access again.		
Screens displays take a while to appear	 Is the unit on the same local network being accessed via proxy? Configure the web browser settings so that access is not performed via proxy. 		
	Are multiple users accessing the unit's IP images at the same time? When multiple users access the unit's IP images at the same time, images may take some time to appear, and the frame rate of the IP images may decrease.		

IP Images

Symptom	Cause and Measure		
Images are not displayed	 Is the plug-in viewer software installed? (Windows) Install the plug-in viewer software. 		
	 If [Check for newer versions of stored pages] is not set to [Every time I visit the webpage] in the temporary Internet file settings, IP images may not appear in the [Live] screen. 		
	Perform the procedure below.		
	 Select [Tools] - [Internet Options] in Internet Explorer. Click the [General] tab, and click the [Settings] button under [Browsing history]. In the [Temporary Internet Files and History Settings] dialog box, select the [Every time I visit the webpage] option under [Check for newer versions of stored pages]. Click the [OK] button. 		
	IP image transmission is not possible in the following cases:		
	 When [CCU MODE] is [2160/23.98p], [2160/23.98psf], [1080/23.98p] or [1080/23.98psF]: When the [SDI OUT5&6] and [SDI OUT7] items in [OUT FORMAT(UHD)] or [OUT FORMAT(HD)] are [trueP] 		
	 When the [SDI OUT5&6] and [SDI OUT7] items in [OUT FORMAT(UHD_HDR)] or [OUT FORMAT(HD_HDR)] are [trueP_HDR] or [trueP_SDR] 		
The images are blurry	Is the focus properly adjusted? Check the focus adjustment.		
Images are not updated	The images may not be updated and other problems may occur depending on your web browser and its version.		
	The images may stop depending on the network congestion, the level of access to the unit, etc.		
	If the IP video settings of the unit were changed, the image display may stop temporarily.		
	 Check the state of access to the unit and stop unnecessary access. Afterward, press the [F5] key on the personal computer's keyboard to request the settings to be acquired. (Windows) Check the state of access to the unit and stop unnecessary access. Afterward, press the [Command] + [R] keys on the personal computer's keyboard to request the settings to be acquired. (Mac) 		
The images do not update or display	Perform the following to delete the temporary Internet files (cache). (Windows)		
properly	 Select [Tools] - [Internet Options] in Internet Explorer. Click the [General] tab, and click the [Delete] button under [Browsing history]. In the [Delete Browsing History] screen, select the [Temporary Internet Files] checkbox, and then click [Delete]. Click the [OK] button. 		
	Perform the following to delete the temporary Internet files (cache). (Mac)		
	 Select [Safari] - [Empty Cache] in Safari. Click [Empty] in the [Are you sure you want to empty the cache?] pop-up screen. 		
	A port of the unit may be being filtered by, for example, the firewall function of the antivirus software.		
H 264 images are not displayed	Change the HTTP port number of the unit to a port number that is not filtered. If the "Network Comers View 45" plus in viewer seftware is deleted in an		
H.264 images are not displayed	 If the "Network Camera View 4S" plug-in viewer software is deleted in an environment where the "Network Camera View 3" plug-in viewer software is installed, display of H.264 images will become impossible. In such cases, delete "Network Camera View 3" before installing "Network Camera View 4S". 		
	 Is the camera connected to the personal computer via the Internet? Set [Internet Mode(over HTTP)] to [On]. 		
The images are distorted	The images may be distorted if the transmission path is congested and proper transmission is not possible. Consult your network administrator.		
	The images may be distorted if video packet shuffling occurs on the transmission path. Outside the standard of the stand		
	 Switching to an identical Internet service provider for both the camera and the personal computer may prevent this problem. Consult your network administrator. 		

Symptom	Cause and Measure	
When multiple web browsers are running to display H.264 images, images from multiple cameras appear sequentially in a single web browser.	This may occur depending on the combination of the personal computer's display adapter and the driver. (Windows) If this occurs, update the first display adapter to the latest version. If this does not resolve the problem, adjust the hardware accelerator function as follows. This section describes the procedure for Windows 7 as an example. Changing the settings may not be possible, depending on your environment. Right-click on the desktop, and select [Screen Resolution] from the menu. Click [Advanced settings]. Select the [Troubleshoot] tab, and click [Change setting]. If the [User Account Control] dialog box appears, click [Yes]. (When logged on with an account other than an administrator account, enter the password (and user name if necessary), and click [Yes].) Change to [Hardware acceleration] setting to [None] at the far left, and click [OK].	

Web Screen

Depending on the OS installed on the personal computer, the following may occur. If a problem occurs, take the corresponding measure. Performing the following solutions will not affect the operation of other applications.

The "information bar" described in the following explanations refers to the message bars that appear in Internet Explorer. (Windows)

Internet Explorer
 The information bar appears at the bottom of Internet Explorer.

Symptom		Cause and Measure
For Internet Explorer 9.0, 10.0, and 11.0: The following message appears in the information bar. [This website wants to run the following add-on: 'WebVideo Module' from 'Panasonic System Networks Co.,Ltd.'.]	•	Select [Allow].
For Internet Explorer 9.0, 10.0, and 11.0: The following message appears in the information bar. [This website wants to install the following add-on: 'nwcv4SSetup. exe' from 'Panasonic System Networks Co.,Ltd.'.]	•	Select [Install]. When the security warning window appears, click the [Install] button.
An unnecessary status bar or scroll bar is displayed in the pop-up	•	Display the Security tab on the Internet Options screen of Internet Explorer, and then select [Internet]. Click the [Custom level] button, set [Allow script-initiated windows without size or position constraints] to [Enable] under [Miscellaneous], and click the [OK] button. When the warning window appears, click the [Yes] button.
The IP images do not match the display frames	•	 Images may not appear correctly if their DPI settings are 120 DPI or higher. Right-click on the desktop of the personal computer, click [Screen Resolution] - [Make text and other items larger or smaller], and select [Smaller - 100% (default)].
	•	Images may not appear correctly if the magnification level of Internet Explorer's zoom function is not set to 100%. • Select [View] - [Zoom] in the menu bar of Internet Explorer, and click [100%].
The layout of the screen is distorted, or some buttons on the screen do not operate	•	Select [Tools] - [Compatibility View Settings] in the menu bar of Internet Explorer, disable compatibility view for the unit.

Power supply	AK-UCU600P/AK-UCU600PS : 100 V - 120 V AC (\sim) , 50 Hz/60 Hz AK-UCU600E/AK-UCU600ES : 100 V - 240 V AC (\sim) , 50 Hz/60 Hz
Power consumption	500 W (Without camera connected: 90 W)
Capacity for supplying power to a camera	240 V AC (√), 1.46 A , 50 Hz/60 Hz

indicates safety information.

Operating temperature	0 °C to 40 °C (32 °F to 104 °F)		
Humidity	10% to 90% (no condensation)		
Dimensions (Width×Height×Depth)	424 mm × 88 mm × 401 mm (16-5/8 inches × 3-7/16 inches × 15-13/16 inches) (excluding protrusions)		
Weight	Approx. 8.9 kg (19.6 lb)		
	3G/HD-SDI 5 lines (embedded audio is supported only for HD signals)		
Video output	12G/6G/3G/HD-SDI 2 lines		
video ouput	HD-SDI 1 line (shared with picture monitor output*2)		
	Analog composite 2 lines (1 line shared with picture monitor output*2)		
HD TRUNK/TICO output	When HD TRUNK: HD-SDI (Supported format: 1080/59i or 1080/50i), 3G/HD-SDI 1 line		
Return input	3G-HD/HD/SD-SDI 4 lines (RET1 input has active-through output)		
Return input	Analog composite 1 line		
	HD-SDI 1 line (with active-through output)		
Prompter input	Analog composite 2 lines (through output of 1 and input of 2 share the connector*2) It is not terminated when the unit is turned OFF. No through output.		
Reference input	BB (black burst) / tri-level*1 1 line (automatic termination, connect to upper connector; BB signal and tri-level signal automatically recognized, with loop-through output)		
Microphone output	0 dBm/600 Ω 2 lines (XLR, 3-pin, male)		
	Intercom input/output (ENG / PROD, 0 dBm, 600 Ω (4 W) / 1 V [p-p], 200 Ω (RTS), 4 W / RTS / CLRCOM) 2 lines*2		
Communication	PGM input (0 dBm/600 Ω) 2 lines		
	Tally input (red, green, yellow) 1 input each		
	WFM control 6-bit (open collector output, terminal shared with camera microphone gain setting*2)		
AUX	Camera microphone gain setting input 5-bit (photo-coupler input, terminal shared with WFM control*2)		
	Down-conversion system setting input 2-bit (photo-coupler input)		
TRUNK	RS-422 / RS-232C 2 lines*2		
FRONT ROP	RS-422 1 line, 16 V DC output (only one of this and REAR ROP can be selected at one time via the menu or the [ROP FRONT/REAR] selection switch on the front panel)		

REAR ROP	RS-422 1 line, 16 V DC output (only one of this and FRONT ROP can be selected at one time via the menu or the [ROP FRONT/REAR] selection switch on the front panel)
MSU	RS-422 1 line, GPI for control
LAN TRUNK	LAN connection with camera side via an optical cable*3 1 line, 100BASE-TX, 1000BASE-T
LAN	Personal computer connection for distribution via the Web*3 1 line, 10BASE-T, 100BASE-TX (use a crossover cable when connecting directly with a personal computer)

^{*1:} The BB (black burst) signal and tri-level sync signal of the reference input are recognized automatically.

The symbols on this product (including the accessories) represent the following:

\sim	AC
	Power on
0	Power off

• For details on the maximum lengths of connection cables, consult your dealer.

Inrush current, measured according to European standard EN55103-1, on initial switch-on: 3 A, after a supply interruption of 5 s: 80 A

^{*2:} Depending on the setting, only one of them can be selected at one time.

 $^{^{*3:}}$ IP video is cannot be transmitted when [CCU MODE] is set to [2160/23.98p], [2160/23.98psf], [1080/23.98ps], or [1080/23.98psF].
